Naritomi,D.W. Krieger,2013-07-08 After decades of focusing on how to alleviate and prevent recurrence of acute CNS injuries the emphasis has finally shifted towards repairing such devastating events and rehabilitation This development has been made possible by substantial progress in understanding the scientific underpinnings of recovery as well as by novel diagnostic tools and most importantly by emerging therapies awaiting clinical trials In this publication several international experts introduce novel areas of neurological reorganization and repair following CNS damage Principles and methods to monitor and augment neuroplasticity are explored in depth and supplemented by a critical appraisal of neurological repair mechanisms and possibilities to curtail disability using computer or robotic interfaces Rather than providing a textbook approach of CNS restoration the editors selected topics where progress is most imminent in this labyrinthine domain of medicine Moreover the varied background and origins of the contributors lend this book a truly global perspective on the current state of affairs in neurological recovery **The relationship between music and language** Lutz Jäncke, Traditionally music and language have been treated as different psychological faculties This duality is reflected in older theories about the lateralization of speech and music in that speech functions were thought to be localized on the left and music functions on the right hemisphere But with the advent of modern brain imaging techniques and the improvement of neurophysiological measures to investigate brain functions an entirely new view on the neural and psychological underpinnings of music and speech has evolved The main point of convergence in the findings of these new studies is that music and speech functions have many aspects in common and that several neural modules are similarly involved in speech and music There is also emerging evidence that speech functions can benefit from music functions and vice versa This new research field has accumulated a lot of new information and it is therefore timely to bring together the work of those researchers who have been most visible productive and inspiring in this field and to ask them to present their new work or provide a summary of their laboratory s work **The Handbook of Language and Speech Disorders** Jack S.
