Identification and Mitigation of Large Landslide Risks in Europe C. Bonnard, F. Forlati, C. Scavia, 2004-09-15 Large landslides affect many mountain valleys in Europe They are characterised by a low probability of evolution into a catastrophic event but can have very large impacts on population infrastructures and the environment This impact is becoming more and more pronounced due to increasing tourism and the construction of new roads and railways in m **Manipulative approaches to human brain dynamics** Keiichi Kitajo, Takashi Hanakawa, Risto Juhani Ilmoniemi, Carlo Miniussi, 2015-05-29 In this EBook we highlight how newly emerging techniques for non invasive manipulation of the human brain combined with simultaneous recordings of neural activity contribute to the understanding of brain functions and neural dynamics in humans A growing body of evidence indicates that the neural dynamics e g oscillations synchrony are important in mediating information processing and networking for various functions in the human brain Most of previous studies on human brain dynamics however show correlative relationships between brain functions and patterns of neural dynamics measured by imaging methods such as electroencephalography EEG magnetoencephalography MEG near infrared spectroscopy NIRS positron emission tomography PET and functional magnetic resonance imaging fMRI In contrast manipulative approaches by non invasive brain stimulation NIBS have been developed and extensively used These approaches include transcranial magnetic stimulation TMS and transcranial electric stimulation tES such as transcranial direct current stimulation tDCS alternating current stimulation tACS and random noise stimulation tRNS which can directly manipulate neural dynamics in the intact human brain Although the neural correlate approach is a strong tool we think that manipulative approaches have far greater potential to show causal roles of neural dynamics in human brain functions There have been technical challenges with using manipulative methods together with imaging methods However thanks to recent technical developments it has become possible to use combined methods such as TMS EEG coregistration We can now directly measure and manipulate neural dynamics and analyze functional consequences to show causal roles of neural dynamics in various brain functions

Moreover these combined methods can probe brain excitability plasticity and cortical networking associated with information processing in the intact human brain The contributors to this EBook have succeeded in showcasing cutting edge studies and demonstrate the huge impact of their approaches on many areas in human neuroscience and clinical applications
