# Accumulating and Assigning Costs to Products

## QUESTIONS

- 4-1 The cost of the raw materials entered into production is moved from the raw materials account to the work-in-process inventory account. The cost of manufacturing labor and overhead costs are assigned to production by adding them to the work-in-process inventory account. Overhead costs are assigned (or allocated or apportioned) as determined by the cost system. When manufacturing is completed, work is transferred to finished goods inventory, and costs are moved from the work-in-process inventory account to the finished goods inventory account. Finally, when goods are sold their costs are moved from the finished goods inventory account to cost of goods sold.
- 4-2 Manufacturing organizations face greater challenges in product costing, especially the assignment of overhead costs, than most of service organizations do. The basic idea behind all manufacturing costing systems is to determine the costs that products accumulate as they traverse organizational resources during manufacturing, as described above in 4-1. In small organizations, goods are purchased rather than manufactured; the cost of the goods purchased is entered into an account that accumulates the cost of manufacturing inventory in the store. There, minor various overhead costs such as labor, depreciation on the store, lighting, and heating. The primary focus in small operations is the profitability of product lines or departments. Therefore, small organizations, like manufacturing organizations, face the issue of how to allocate various overhead costs to determine, for example, the cost of purchasing and selling products, or department costs.

Service organizations that undertake major projects, such as in a consultancy, focus on determining the cost of a project. In such situations, the major direct cost, employee pay, is often a large proportion of the project's cost. The organization will also assign various overhead costs to measure project profitability.

*MANAGEMENT AND COST ACCOUNTING* COLIN M. DRURY, 2013-12-11      Game Theory in Management Accounting

David Mueller, Ralf Trost, 2017-09-21 This book demonstrates what kind of problems originating in a management accounting setting may be solved with game theoretic models. Game theory has experienced growing interest and numerous applications in the field of management accounting. The main focus traditionally has been on the field of non-cooperative behaviour but the area of cooperative game theory has developed rapidly and has received increasing attention. Intensive research in combination with the changing culture of publishing has produced a nearly unmanageable number of publications in the areas concerned. Therefore one main purpose of this volume is providing an intensive analysis of the intersection of these areas. In addition, the book strengthens the relationship between the theory and the practical applications and it illustrates the two-sided relationship between game theory and management accounting. New game theoretic models offer new fields of applications and these applications raise new questions for the theory.

### **Financial Management for Hospitality**

**Decision Makers** Chris Guilding, 2007-08-22 Financial Management for Hospitality Decision Makers is written specifically for those decision makers in the industry who need to be able to decipher accountant speak and reports in order to use this information to its best advantage and achieve maximum profits. The area of accounting and finance is a vital but often inaccessible part of the hospitality business. However, having the knowledge and the ability to use it properly makes all the difference to the turnover and success of a business. Financial Management for Hospitality Decision Makers is written specifically for those industry executives who need to be able to decipher, appreciate and utilise valuable financial management tools and techniques in order to realise maximum profits. Highly practical in its scope and approach, this book outlines the procedure and purpose behind various financial activities including budgeting, year-end financial statement analysis, double entry accounting, managing and analysing costs, working capital management and investment decision making. Demonstrates how an appropriate analysis of financial reports can drive your business strategy forward from a well-informed base. Clearly highlights the key financial issues you need to consider in a host of decision-making situations. Includes a range of problems to help readers appraise their understanding of concepts with solutions provided for lecturers at <http://textbooks.elsevier.com>. At all times, the book rigorously applies itself to the specific needs of the hospitality decision maker, contextualising and explaining financial decision making and control in this light. Combining a user-friendly structure with frequent international cases, worked examples and sample reports to illuminate the theory. Financial Management for Hospitality Decision Makers is ideal for all students of hospitality as well as being a vital source of information for practitioners already in the industry.
