

Stages of Mitosis

Draw the structures of the cell during each stage of cell division. Then write a brief summary of what stages take place in each stage. You can remember the order of these stages by the mnemonic device: (I) Draw (M)ore (A) The (C)hunks. (SPHASE)

INTERPHASE

The cell grows and replicates its DNA and organelles.

PROPHASE

The chromatin condenses into chromosomes. The centrioles separate, and the spindle begins to form. The nuclear envelope breaks down.

METAPHASE

The chromosomes line up across the center of the cell. Each chromosome is connected to spindle fibers at its centromeres.

ANAPHASE

The sister chromatids separate into individual chromosomes and are moved apart.

TELOPHASE

The chromosomes gather at opposite ends of the cell and lose their distinct shapes. Two new nuclear envelopes will form.

CYTOKINESIS

The cytoplasm pinches in half. Each daughter cell has an identical set of duplicate chromosomes.
