

## 1. GENERAL

### (1) Combustion Chamber

The combustion chamber is made up of the cylinder head and piston top. The injection nozzle as well as the nozzle tube is mounted to the cylinder head. The nozzle tube holds the nozzle in position and protects the nozzle sheathed by it from coolant. Since the outside of the nozzle tube is exposed to the water jacket, the top end of the tube is sealed off with an O-ring and the bottom end staked to prevent entrance of water.

Combustion is accomplished by compressing the fuel directly injected into the combustion chamber.

For more effective cooling of the combustion chamber, water directors which direct coolant flow are pressed into the bottom of the cylinder head.

### (2) Valve Mechanism

The valve mechanism is of overhead valve type and is constructed as shown above.
