Introduction to Maple Andre HECK, 2011-06-27 The first two editions of this book have been very well received by the community but so many revisions of the Maple system have occurred since then that simply reprinting the out of stock book would not do anymore A major revision of the book was inevitable too The wording major revision must be taken seriously because I not only corrected typographical errors rephrased text fragments and updated many examples but I also rewrote complete chapters and added new material In particular the chapter on differential equations now discusses Lie symmetry methods partial differential equations and numerical methods Linear algebra is based throughout the book on the packages LinearAlgebra and VectorCalculus which replace the deprecated package linalg Maple users are strongly advised to do their work with the new packages The chapter on simplification has been updated and expanded it discusses the use of assumptions in more detail now Last but not least a new chapter on Gröbner basis theory and the Gröbner package in Maple has been added to the book It includes many applications of Gröbner basis theory Many of the Maple sessions have been rewritten so that they comply with the most recent version of Maple As a result of all this work hardly any section in the book has been left untouched
