Kolmogorov,Adol'f Pavlovich I□U□shkevich,2001-03 This multi authored effort Mathematics of the nineteenth century to be fol lowed by Mathematics of the twentieth century is a sequel to the History of mathematics from antiquity to the early nineteenth century published in three volumes from 1970 to 1972 1 For reasons explained below our discussion of twentieth century mathematics ends with

the 1930s Our general objectives are identical with those stated in the preface to the three volume edition i.e. we consider the development of mathematics not simply as the process of perfecting concepts and techniques for studying real world spatial forms and quantitative relationships but as a social process as well. Mathematical structures once established are capable of a certain degree of autonomous development. In the final analysis however such immanent mathematical evolution is conditioned by practical activity and is either self directed or as is most often the case is determined by the needs of society. Proceeding from this premise we intend first to unravel the forces that shape mathematical progress. We examine the interaction of mathematics with the social structure, technology, the natural sciences and philosophy. Through an analysis of mathematical history proper we hope to delineate the relationships among the various mathematical disciplines and to evaluate mathematical achievements in the light of the current state and future prospects of the science. The difficulties confronting us considerably exceeded those encountered in preparing the three volume edition.

*Writing Mathematically* Candia Morgan, 1998 School mathematics curricula internationally tend to emphasise problem solving and have led to the development of opportunities for children to do maths in a more open creative way. This has led to increased interest in performance based assessment which involves children in substantial production of written language to serve as evidence of their mathematical activity and achievement. However this raises two important questions

Firstly does this writing accurately present children s mathematical activity and ability Secondly do maths teachers have sufficient linguistic awareness to support their students in developing skills and knowledge necessary for writing effectively in their subject area The author of this book takes a critical perspective on these questions and through an investigation of teachers readings and evaluations of coursework texts identifies the crucial issues affecting the accurate assessment of school mathematics
