**Fission-Track Thermochronology and its Application to Geology** Marco G. Malusà, Paul G. Fitzgerald, 2018-07-14  
This book is focused on the basics of applying thermochronology to geological and tectonic problems with the emphasis on fission track thermochronology. It is conceived for relatively new practitioners to thermochronology as well as scientists experienced in the various methods. The book is structured in two parts. Part I is devoted to the fundamentals of the fission track method to its integration with other geochronologic methods and to the basic principles of statistics for fission track dating and sedimentology applied to detrital thermochronology. Part I also includes the historical development of the technique and thoughts on future directions. Part II is devoted to the geological interpretation of the thermochronologic record. The thermal frame of reference and the different approaches for the interpretation of fission track data within a geological framework of both basement and detrital studies are discussed in detail. Separate chapters demonstrate the application of fission track thermochronology from various perspectives e.g. tectonics, petrology, stratigraphy, hydrocarbon exploration, geomorphology, with other chapters on the application to basement rocks in orogens, passive continental margins, and cratonic interiors as well as various applications of detrital thermochronology.

**Air Conditioning, Heating and Ventilating**, 1922 Breakthrough BCI Applications in Medicine Christoph Guger, Rossella Spataro, Adam Olding Hebb, Dean Krusienski, Vivek Prabhakaran, 2021-02-04 The Heating and Ventilating Magazine, 1922 Prioritizing Sustainability Education Joan Armon, Stephen Scoffham, Chara Armon, 2019-12-05 Prioritizing Sustainability Education presents theory to practice essays and case studies by educators from six countries who elucidate dynamic approaches to sustainability education. Too often students graduate with exploitative consumer driven orientations toward ecosystems and are unprepared to confront the urgent challenges presented by environmental degradation. Educators are prioritizing sustainability oriented courses and programs that cultivate students' knowledge, skills, and values and contextualize them within relational connections to local and global ecosystems. Little has yet been written, however, about the comprehensive sustainability education that educators are currently designing and implementing, often across or at the edges of disciplinary boundaries. The approaches described in this book expand beyond conventional emphases on developing students' attitudes, knowledge, and behaviors by thinking and talking about ecosystems to additionally engaging students with ecosystems in sensory, affective, psychological, and cognitive dimensions as well as imaginative, spiritual, or existential dimensions that guide environmental care and regeneration. This book supports educators and graduate and upper level undergraduate students in the humanities, social sciences, environmental studies, environmental sciences, and professional programs in considering how to reorient their fields toward relational sustainability perspectives and practices.

A National Strategy to Reduce Food Waste at the Consumer Level National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Food and Nutrition Board, Board on Environmental Change and Society, Committee on a Systems Approach to Reducing Consumer Food Waste, 2020-10-14 Approximately 30 percent of the edible food produced in the United States is wasted and a significant portion of this waste occurs at the consumer level Despite food's essential role as a source of nutrients and energy and its emotional and cultural importance U.S. consumers waste an estimated average of 1 pound of food per person per day at home and in places where they buy and consume food away from home Many factors contribute to this waste consumers' behaviors are shaped not only by individual and interpersonal factors but also by influences within the food system such as policies food marketing and the media Some food waste is unavoidable and there is substantial variation in how food waste and its impacts are defined and measured But there is no doubt that the consequences of food waste are severe the wasting of food is costly to consumers depletes natural resources and degrades the environment In addition at a time when the COVID-19 pandemic has severely strained the U.S. economy and sharply increased food insecurity it is predicted that food waste will worsen in the short term because of both supply chain disruptions and the closures of food businesses that affect the way people eat and the types of food they can afford A National Strategy to Reduce Food Waste at the Consumer Level identifies strategies for changing consumer behavior considering interactions and feedbacks within the food system It explores the reasons food is wasted in the United States including the characteristics of the complex systems through which food is produced marketed and sold as well as the many other interconnected influences on consumers' conscious and unconscious choices about purchasing preparing consuming storing and discarding food This report presents a strategy for addressing the challenge of reducing food waste at the consumer level from a holistic systems perspective

**Antifungal and Antiparasitic Drug Delivery** Juan José Torrado Durán, Dolores R.

Serrano, Javier Capilla, 2020-07-01 Fungal and parasitic diseases affect more than one billion people across the globe This is

one sixth of the world's population mostly located in developing countries. The lack of effective and safe treatments combined with inefficient diagnosis leads to serious chronic illness or even death. There is a discrepancy between the rate of drug resistance and the development of new medicines. Formulation of antifungal and antiparasitic drugs adapted to different administration routes is challenging, bearing in mind the poor water solubility that limits their bioavailability and efficacy. There is an unmet clinical need to develop vaccines, novel formulations and drug delivery strategies that can improve the bioavailability and therapeutic effects by enhancing their dissolution, increasing their chemical potency, stabilizing the drug and targeting high concentrations of the drug to infection sites. This Special Issue includes ten research articles of antifungal and antiparasitic drug delivery systems. [Encyclopedia of Analytical Science](#), 2019-04-02.
