

## Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] Circles are females and squares are males.
- [I] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1-15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1-1?

These parents (1-1 and 1-2) had a color blind son (1-2). His dad has no recessive, but color blind allele. From his mother. Since the mother is not shaded she must be a carrier.

Number 1-4 is color blind just like his father. Where did he get his allele for color blindness?

Yes, he inherited his allele for color blindness from his mother. Must have been that 1-3 is a carrier. From their father.

Number numbers 1-5 and 1-6 were color blind. How did they have a color blind son (1-8)?

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a color blind daughter? Explain.

To have a color blind daughter, she must have the recessive allele on both of her parents. Her father must be XY and mother must have to be XX.

If mother 1-1 has a normal son, what is the probability that their son will be color blind?

$XX^{bC} \times XY$  → all of their sons will have color blind.  
 (Carrier)  
 (normal)
