Genetics Of Chickens:

Genetics of Chicken Colours Sigrid van Dort, David Hancox, 2009 *Genetics of the Fowl* F. B. Hutt, 2003-05 This has been the indispensable companion of chicken breeders since its introduction in 1949 Chapters include the genetics of plumage egg production body size disease resistance and much more Animals Pets **Genetics and the Behavior of Domestic Animals** William M. Muir, Heng Wei Cheng, 2013-04-22 Many behaviors in poultry can be modified by genetic selection Selection of laying hens for maximum egg production had the unfortunate side effect of increased rates of beak inflicted damage on other birds Selective breeding has eliminated broodiness and has either increased or decreased other behaviors such as hysteria fearfulness appetite in broilers social dominance ability and damage to other birds Genetic selection can be used to reduce behaviors that cause welfare problems However it must be approached with caution to avoid unintended consequences that would be detrimental to welfare A calm docile bird that appears behaviorally calm may take longer for its heart rate to return to normal after it is frightened The use of group selection instead of single bird selection can be effectively used to reduce undesirable behaviors such as feather pecking and to maintain high egg production An entire group of birds is selected instead of selecting individuals *Genetics* George Harrison Shull, Donald Forsha Jones, Leslie Clarence Dunn, Curt Stern, Royal Alexander Brink, 1919 Genetics accepts contributions that present the results of original research in genetics and related scientific disciplines Genetics Philip Mark Meneely, Rachel Dawes Hoang, Iruka N. Okeke, Katherine Heston, 2017 Genetics Genes Genomes and Evolution unites evolution genomics and genetics in a single narrative approach It is an approach that provides students with a uniquely flexible and contemporary view of genetics genomics and evolution Animal Genetics and Diseases: Advances in Farming and Livestock Systems Mark S. Fife, John A. Hammond, Andrea B. Doeschl-Wilson, 2020-02-14 The new Animal Genetics and Disease 2017 conference committee organized a Research Topic for the proceedings of this inaugural conference The meeting brought together specialists working on the interface between genomics genetic engineering and infectious disease with the aims of improving animal and human health and welfare This conference was funded by Advanced Courses and Scientific Conference at the Wellcome Genome Campus Hinxton UK The conference will highlight breakthroughs in genomic technologies that are rapidly increasing our understanding of the fundamental role that host and pathogen genetics play in infections and epidemics This Research Topic focuses on how infections spread and how they further affect the productivity of livestock systems and food supply chains Thanks to technological advances we now have the tools for real time surveillance of zoonoses affecting wildlife farm animals and animal to human disease transmission Genetics and Eugenics William Ernest Castle, 1924

Poultry Production in Ohio R. George Jaap, 196? **Soviet Genetics** , 1983 *Chicken Genetics* , The University of Wisconsin features information about genetic experiments on chickens as part of the Why Files resource The experiments are an attempt to create chickens with three legs and only one wing Why Files uses news and current events to explore science

and the issues it raises The content is linked to specific National Science Education Standards and offers links to related sites David Tenenbaum compiled the information Journal of Genetics ,1921 **Genetics and Evolution of the Domestic Fowl** Lewis Stevens,1991-11-21 The science of genetics has undergone a period of very rapid and significant development in recent years and the area of poultry genetics has been no exception This book provides a balanced and up to date account of all the major areas of this subject from Mendelian to modern molecular genetics The book begins by tracing the evolution of *Gallus domesticus* from its avian ancestors Subsequent chapters cover important aspects of poultry genetics including cytogenetics transmission genetics gene mapping sex linkage lethal genes genetics of feathering and plumage and quantitative genetics In each chapter a concise explanation of the genetic principles is followed by a full discussion illustrated by key examples In the latter part of the book recent advances in gene cloning and sequencing are examined The impact of these exciting new developments on our understanding of gene structure and organisation immunogenetics and the evolution of proteins is assessed Finally the uses of transgenic techniques and their implications are discussed This book provides a clear and useful survey of the genetics and evolution of the domestic fowl which will be of interest to postgraduate students and researchers in the fields of genetics agriculture and veterinary medicine as well as to poultry breeders both commercial and non commercial **Domestication and early experiences in chickens** Pia Katrine Løtvedt,2017-11-17 A number of animal species have undergone domestication the process of becoming adapted to living in captivity and in proximity to humans Common for these species is that they have all developed certain traits including changes to coat color body size and level of fearfulness This has been termed the domestic phenotype Among these traits is also an attenuation of the response to stress both behaviorally and physiologically Thus release of glucocorticoids such as cortisol or corticosterone is lower in domesticated species However the underlying mechanism for this is not yet well understood In this thesis we have investigated genetic mechanisms for the attenuation of the physiological stress response in ancestral chickens the Red Junglefowl and domesticated chickens the White Leghorn We found a number of genes that differed in expression between the two breeds in several tissues involved in the stress response Among the most interesting findings were lower expression of genes involved in production and secretion of ACTH in the pituitary and in the production of glucocorticoids in the adrenal glands in the domesticated White Leghorns We also found higher expression of the glucocorticoid receptor in White Leghorns indicating that they may have a more efficient negative feedback of the physiological stress response We then investigated the transcriptome of the chicken pituitary more closely and we discovered that a number of genes highly involved in several important physiological axes showed differential expression between the ancestral and the domesticated breed Among these were genes involved in the stress response the reproductive system and in metabolism and growth As these traits are modified in domesticated species our results suggest that changes to gene expression in the pituitary may be an important underlying factor of the domestic phenotype A separate aim of this thesis was to investigate effects of hatching

time in chickens on their subsequent phenotype Time of hatching constitutes an early experience that may differ between individuals and we therefore hypothesized that differences in hatching time would affect chickens later in life While a number of studies have been performed on hatching time and post hatch growth very little work has been done on effects on behavior We found that the time of hatching had sex specific effects Hatching times in females were negatively correlated with body weight whereas in males behaviors such as reaction to novelty and spatial learning were affected As time of hatching is governed by various hormones including thyroid hormone and corticosterone we suggest that changes to the levels of these hormones could affect both hatching time and post hatch phenotypes Understanding these mechanisms better would be beneficial in terms of production where batch homogeneity is important in research on early experiences and the potential for maternal programming and in evolutionary questions on trade off between different life strategies [Art and Science in Breeding](#) Margaret Elsinor Derry,2012-01-01 Chickens are now the most scientifically engineered of livestock How have the methods used by geneticists differed from those employed by domestic breeders over time Art and Science in Breeding details the relationship between farm practices and agricultural genetics in poultry breeding from 1850 to 1960 Margaret E Derry traces the history and organization of chicken breeding in North America from craft approaches and breeding as an art to the conflicts that had emerged between traditional and scientific methods by the 1940s Derry assesses links between the scientific revolution of chicken farming and the development of corporate breeding as a modern international industry Using poultry as a case study for the wider narrative of agricultural genetics Art and Science in Breeding adds considerable knowledge to a rapidly growing field of inquiry *Research Awards Index* ,1989
