

**A. Crosses Involving One Trait:**

For the problems in the section we will use some of the traits that Mendel observed in garden peas.

| Trait           | Dominant Allele | Recessive Allele |
|-----------------|-----------------|------------------|
| Seed coat color | Brown (B)       | White (b)        |
| Seed coat shape | Round (R)       | Wrinkled (r)     |
| Pod color       | Green (G)       | Yellow (g)       |
| Height of plant | Tall (T)        | Short (t)        |

Remember, the genotype for each plant must have two letters, one representing an allele from each parent. For example, if a seed is round, it could have two possible genotypes – BB or Bb. BB is homozygous, since the two alleles are identical, its phenotype is brown. Bb is heterozygous, since the two alleles are different. Its phenotype is also brown because the allele for brown seeds (B) is dominant over the allele for white seeds (b).

**Problems:** For the crosses in problems 1-8 (a) draw a Punnett square in the space provided and write (b) the genotype and (c) the phenotype on the indicated lines. Use the trait information in the table above for a description of the traits.
