There are six Punnett square problems featured below. You will be graded on both filling in the Punnett square as well as filling in the correct answer next to the multiple choice questions after each problem.

Problem One: Typical Punnett Square Problem

Milhouse is extremely worried that because his dad is bald he will also be bald. To relieve his fear, he has asked you to use your Punnett square skills to determine what the probability of him being bald will be. Milhouse is aware that his dad is heterozygous for baldness (Bb) while his mom does not carry the baldness gene and so she is homozygous for no baldness (bb). Remember baldness is dominant (B) while no baldness is recessive (b).

_____ 1. What is the probability that Milhouse will be bald?

- a. 0% b. 25% c. 50% d. 75%

Problem Two: Incomplete Dominance

Santa's Little Helper is heterozygous light brown (BB'), a combination of dark brown (B) and white (B'). Homer wants to get puppies that are dark brown, light brown and white and has two choices of dogs he can mate with Santa's Little Helper: Penelope, who is also light brown (BB') or Samantha, who is white ($B'B'$). Create Punnett Squares for each dog to help Homer figure out the answer.

George Gaylord Simpson Léo F. Laporte, 2000 Focusing on Simpson's scientific contributions Laporte provides chapters on Simpson's earliest paleontological research through his distinguished Alexander Agassiz professorship at Harvard and his extensive fieldwork for the American Museum of Natural History where he developed the core themes set forth in his most prestigious work *Tempo and Mode in Evolution* **The Psychology of the Simpsons** Alan S. Brown, Chris

Logan, 2009-06-22 Psychologists turn their attention to *The Simpsons* one of America's most popular and beloved shows in these essays that explore the function and dysfunctions of the show's characters Designed to appeal to both fans of the show and students of psychology this unique blend of science and pop culture consists of essays by professional psychologists drawn from schools and clinical practices across the country Each essay is designed to be accessible thoughtful and entertaining while providing the reader with insights into both *The Simpsons* and the latest in psychological thought Every major area of psychology is covered from clinical psychology and cognition to abnormal and evolutionary psychology while fresh views on eclectic show topics such as gambling addiction Pavlovian conditioning family therapy and lobotomies are explored *Evolutionary Quantitative Genetics* Stevan J. Arnold, 2023-06-19 Evolutionary quantitative genetics EQG

provides a formal theoretical foundation for quantitatively linking natural selection and genetic variation to the rate and expanse of adaptive evolution It has become the dominant conceptual framework for interpreting the evolution of quantitative traits in terms of elementary forces mutation inheritance selection and drift Despite this success the relevance of EQG to many biological scenarios remains relatively unappreciated with numerous fields yet to fully embrace its approach Part of the reason for this lag is that conceptual advances in EQG have not yet been fully synthesized and made accessible to a wider academic audience A comprehensive accessible overview is therefore now timely and *Evolutionary Quantitative Genetics* provides this much needed synthesis The central argument of the book is that an adaptive landscape concept can be used to understand both evolutionary process within lineages and the pattern of adaptive radiations In particular it provides a convincing argument that models with a moving adaptive peak carry us further than any other conceptual approach yet devised Although additive theory holds center stage the book mentions and references departures from additivity including non Gaussian distributions of allelic effects dominance epistasis maternal effects and phenotypic plasticity This accessible advanced textbook is aimed principally at students from senior undergraduate to postgraduate as well as practising scientists in the fields of evolutionary biology ecology physiology functional morphology developmental biology comparative biology paleontology and beyond who are interested in how adaptive radiations are produced by evolutionary and ecological processes **Genetic Witness** Jay Aronson, 2007-10-11 When DNA profiling was first introduced into the American legal

system in 1987 it was heralded as a technology that would revolutionize law enforcement As an investigative tool it has lived up to much of this hype it is regularly used to track down unknown criminals put murderers and rapists behind bars and

exonerate the innocent Yet this promise took ten turbulent years to be fulfilled In Genetic Witness Jay D Aronson uncovers the dramatic early history of DNA profiling that has been obscured by the technique s recent success He demonstrates that robust quality control and quality assurance measures were initially nonexistent interpretation of test results was based more on assumption than empirical evidence and the technique was susceptible to error at every stage Most of these issues came to light only through defense challenges to what prosecutors claimed to be an infallible technology Although this process was fraught with controversy inefficiency and personal antagonism the quality of DNA evidence improved dramatically as a result Aronson argues however that the dream of a perfect identification technology remains unrealized **Cumulated Index**

Provine, 1998 Biology was forged into a single coherent science only within living memory In this volume the thinkers responsible for the modern synthesis of evolutionary biology and genetics come together to analyze that remarkable event In a new Preface Ernst Mayr calls attention to the fact that scientists in different biological disciplines varied considerably in their degree of acceptance of Darwin s theories Mayr shows us that these differences were played out in four separate periods 1859 to 1899 1900 to 1915 1916 to 1936 and 1937 to 1947 He thus enables us to understand fully why the synthesis was necessary and why Darwin s original theory that evolutionary change is due to the combination of variation and selection is as solid at the end of the twentieth century as it was in 1859
