Geoengineering Governance And Technology Policy:

Geoengineering Kelsi Bracmort, 2011 This is a print on demand edition of a hard to find publication The term geoengineering describes this array of technologies that aim through large scale and deliberate modifications of the Earth's energy balance to reduce temperatures and counteract anthropogenic climate change Most of these technologies are at the conceptual and research stages and their effectiveness at reducing global temperatures has yet to be proven Moreover very few studies have been published that document the cost environmental effects sociopolitical impacts and legal implications of geoengineering Contents of this report Intro Geoengineering Governance Geoengineering Technologies The Debate over the Methods of Oversight The Debate over Oversight and Governmental Involvement Conclusion Illus **Geoengineering** Kelsi Bracmort, 2014-12-31 Climate change policies at both the national and international levels have traditionally focused on measures to mitigate greenhouse gas GHG emissions and to adapt to the actual or anticipated impacts of changes in the climate As a participant in several international agreements on climate change the United States has joined with other nations to express concern about climate change Some recent technological advances and hypotheses generally referred to as geoengineering technologies have created alternatives to traditional approaches to mitigating climate change If deployed these new technologies could modify the Earth's climate on a large scale Moreover these new technologies may become available to foreign governments and entities in the private sector to use unilaterally without authorization from the United States government or an international treaty as was done in the summer of 2012 when an American citizen conducted an ocean fertilization experiment off the coast of Canada **Geoengineering** Library of Congress. Congressional Research Service, 2010 Provides background on policy issues science and governance of geoengineering or climate engineering technologies Describes policy parameters under which geoengineering technologies may be considered provides details on selected technologies and their status discusses possible approaches to governmental involvement in and oversight of geoengineering including summary of domestic and international governance structures and institutions that may affect geoengineering projects *Climate Engineering and the Law* Michael B. Gerrard, Tracy Hester, 2018-04-12 Climate change is increasingly recognized as a global threat and is already contributing to record breaking hurricanes and heat waves To prevent the worst impacts attention is now turning to climate engineering the intentional large scale modification of the environment to reduce the impact of climate change The two principal methods involve removing some carbon dioxide from the atmosphere which could consume huge amounts of land and money and take a long period of time and reducing the amount of solar radiation reaching the earth's surface perhaps by spraying aerosols into the upper atmosphere from airplanes which could be done quickly but is risky and highly controversial This is the first book to focus on the legal aspects of these technologies what government approvals would be needed how liability would be assessed and compensation provided if something goes wrong and how a governance system could be structured and agreed internationally Learning

from Weather Modification Law for the Governance of Regional Solar Radiation Management Manon Simon, 2024-05-09 This book investigates the role of cloud seeding laws in governing regional solar radiation management SRM activities It challenges the prevailing belief that cloud seeding laws are irrelevant to regional SRM governance and argues for their applicability Through case studies in Australia Canada and the United States the book highlights the need for legal frameworks that promote cross scale interactions stakeholder participation flexible decision making and conflict resolution It advocates for adopting adaptive governance principles to effectively manage the risks and uncertainties associated with regional SRM interventions By filling a gap in the existing literature this book offers valuable insights and recommendations for the governance of regional SRM shedding light on the potential of cloud seeding laws to inform and shape SRM governance frameworks It provides a comprehensive analysis of the legal and normative aspects offering practical guidance for policymakers researchers and stakeholders involved in regional SRM initiatives

Research Handbook on International Marine Environmental Law Rosemary Rayfuse, 2015-10-30 This authoritative Handbook examines the current state of and the future challenges for international law in addressing the key activities that pose threats to the marine environment It provides a critical analysis of and constructive solutions for the international legal regime for the protection of the marine environment and identifies areas of vital research need for the future The in depth chapters written by emerging and established experts in their fields explore the legal framework for protection of the marine environment and look at issues such as pollution seabed activities and climate change as well as discussing the protection of marine biodiversity and considering regional approaches to the protection of the marine environment Each chapter goes beyond a survey of existing law to identify the shortcomings in the legal regime and areas of critical research needed to address these shortcomings This timely book provides significant insights into contemporary issues surrounding the efficacy of the regime created by the 1982 Law of the Sea Convention and details the further work needed to ensure the design and implementation of effective regulation and management of human activities that affect the marine environment Students and academics researching in the law of the sea and environmental law will find the Handbook central to their subject areas The analyses and reform proposals are an invaluable resource for government and policy practitioners as well as IGOs and NGOs involved in marine environmental issues

Transboundary Environmental Governance Simon Marsden, 2016-02-24 Effective protection of the marine and terrestrial environment increasingly requires cooperation between neighbouring States international organizations government entities and communities within States This book analyses key aspects of transboundary environmental law and policy and their implementation in Asia Australasia and Australian offshore territories and surrounding areas beyond national jurisdiction including Antarctica It discusses the potential for implementing key transboundary environmental mechanisms such as the 1991 Convention on Environmental Impact Assessment in a Transboundary Context Espoo Convention and its 1997 Protocol on Strategic Environmental Assessment Kiev Protocol in

Australia and Asia drawing on experience from other regions and the potential application of these agreements to all UN member states The book makes an innovative contribution to research in the area of transboundary environmental governance particularly as it applies to Asia Australasia and international areas supplementing similar research which has predominantly focused on Europe and North America

Technoscience and Citizenship: Ethics and Governance in the Digital Society Ana Delgado,2017-01-05 This book provides insights on how emerging technosciences come together with new forms of governance and ethical questioning Combining science and technologies and ethics approaches it looks at the emergence of three key technoscientific domains body enhancement technologies biometrics and technologies for the production of space exploring how human bodies and minds the movement of citizens and space become matters of technoscientific governance The emergence of new and digital technologies pose new challenges for representative democracy and existing forms of citizenship As citizens encounter and have to adapt to technological change in their everyday life new forms of conviviality and contestation emerge This book is a key reference for scholars interested in the governance of emerging technosciences in the fields of science and technology studies and ethics

Earth Grab Diana Bronson,2011-10-27 Exploiting the general public s growing concerns about the ecological and climate crisis some corporations are proposing quick fixes that threaten to wreak havoc on our planet This book exposes how a biomass economy based on using gene technologies to reprogram living organisms will devastate our ecosystems as well as the human populations of the southern hemisphere by accelerating the wave of land grabs already common in Africa Asia and Latin America Well researched and groundbreaking this analysis explores a number of interrelated topics vis vis the uses of bio and nano technologies

The Limits of Maritime Jurisdiction Clive H. Schofield,Seokwoo Lee,Moon-Sang Kwon,2013-11-28 The Limits of Maritime Jurisdiction edited by Clive Schofield Seokwoo Lee and Moon Sang Kwon comprises 36 chapters by leading oceans scholars and practitioners devoted to both the definition of maritime limits and boundaries spatially and the limits of jurisdictional rights within claimed maritime zones Contributions address conflicting maritime claims and boundary disputes access to valuable marine resources protecting the marine environment maritime security and combating piracy concerns over expanding activities and jurisdiction in Polar waters and the impact of climate change on the oceans including the potential impact of sea level rise on the scope of claims to maritime zones The volume therefore offers critical analysis on a range of important and frequently increasingly pressing contemporary law of the sea issues

Geoengineering Discourse Confronting Climate Change Brynna Jacobson,2022-07-07 Geoengineering the idea of addressing climate change through large scale technological projects stands out among contested technologies in the degree to which its scope of possibilities and its premise are characterized by global existential risks Despite controversy this field has been shifting toward mainstream consideration Geoengineering Discourse Confronting Climate Change The Move from Margins to Mainstream in Science News Media and Politics examines the trajectory of geoengineering through critical discourse analysis of three key

genres science policy reports news journalism and congressional hearings Brynna Jacobson explores how reports from distinguished scientific societies have constructed certain notions of legitimacy around geoengineering how narratives within news coverage have reflected and shaped the public discourse and understanding of geoengineering and how geoengineering has garnered political support from both major political parties in the United States Through analysis of discursive conventions within these genres the author reveals the evolution of notions of normalcy legitimacy and imperative around the field of geoengineering

Structural Human Ecology Nadine Bratchatzek, Paul Ehrlich, Sylvia Hiller, Roger E. Kasperson, Sandra T. Marquart-Pyatt, Allan Mazur, Ortwin Renn, Dirk Scheer, 2021-09-24 The desire to understand people's influence on ecosystems has inspired scientific studies and analyses of the stress individuals and communities place on the environment human well being and the tradeoffs between them As an emerging discipline Structural Human Ecology is devoted to unlocking the dynamic links between population environment social organization and technology The new field offers cutting edge research in risk analysis that can be used to evaluate environmental policies and thus help citizens and societies worldwide learn how to most effectively mitigate human impacts on the biosphere The essays in this volume were presented by leading international scholars at a 2011 symposium honoring the late Dr Eugene Rosa then Boeing Distinguished Professor of Environmental Sociology at WSU

Climate Change and the Law Erkki J. Hollo, Kati Kulovesi, Michael Mehling, 2012-12-04 Climate Change and the Law is the first scholarly effort to systematically address doctrinal issues related to climate law as an emergent legal discipline It assembles some of the most recognized experts in the field to

identify relevant trends and common themes from a variety of geographic and professional perspectives In a remarkably short time span climate change has become deeply embedded in important areas of the law As a global challenge calling for collective action climate change has elicited substantial rulemaking at the international plane percolating through the broader legal system to the regional national and local levels More than other areas of law the normative and practical framework dedicated to climate change has embraced new instruments and softened traditional boundaries between formal and informal public and private substantive and procedural so ubiquitous is the reach of relevant rules nowadays that scholars routinely devote attention to the intersection of climate change and more established fields of legal study such as international trade law Climate Change and the Law explores the rich diversity of international regional national sub national and transnational legal responses to climate change Is climate law emerging as a new legal discipline If so what shared objectives and concepts define it How does climate law relate to other areas of law Such questions lie at the heart of this new book whose thirty chapters cover doctrinal questions as well as a range of thematic and regional case studies As Christiana Figueres Executive Secretary of the United Nations Framework Convention on Climate Change UNFCCC states in her preface these chapters collectively provide a review of the emergence of a new discipline its core principles and legal techniques and its relationship and potential interaction with other disciplines

The Politics of Green Transformations Ian Scoones, Melissa Leach, Peter Newell, 2015-01-09 Multiple green

transformations are required if humanity is to live sustainably on planet Earth. Recalling past transformations, this book examines what makes the current challenge different and especially urgent. It examines how green transformations must take place in the context of the particular moments of capitalist development and in relation to particular alliances. The role of the state is emphasised both in terms of the type of incentives required to make green transformations politically feasible and the way states must take a developmental role in financing innovation and technology for green transformations. The book also highlights the role of citizens as innovators, entrepreneurs, green consumers and members of social movements. Green transformations must be both top down involving elite alliances between states and business but also bottom up pushed by grassroots innovators and entrepreneurs and part of wider mobilisations among civil society. The chapters in the book draw on international examples to emphasise how contexts matter in shaping pathways to sustainability. Written by experts in the field, this book will be of great interest to researchers and students in environmental studies, international relations, political science, development studies, geography and anthropology as well as policymakers and practitioners concerned with sustainability.

The Oxford Handbook of Law, Regulation and Technology Roger Brownsword, Eloise Scotford, Karen Yeung, 2017-07-25

The variety, pace and power of technological innovations that have emerged in the 21st Century have been breathtaking. These technological developments, which include advances in networked information and communications, biotechnology, neurotechnology, nanotechnology, robotics and environmental engineering technology, have raised a number of vital and complex questions. Although these technologies have the potential to generate positive transformation and help address grand societal challenges, the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects. Is there a potential harm to human health or the environment? What are the ethical implications? Do these innovations erode or antagonize values such as human dignity, privacy, democracy or other norms underpinning existing bodies of law and regulation? These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal, social and ethical dimensions of technological innovation. This handbook collates the many and varied strands of this scholarship, focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law, emerging technology and regulation. Structured in five parts, the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance. II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate. III studies the challenges for law in responding to the emergence of new technologies, examining how legal norms, doctrine and institutions have been shaped, challenged and destabilized by technology and even how technologies have been shaped by legal regimes. IV provides a critical exploration of the implications of technological innovation, examining the ways in which technological innovation has generated challenges for

regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance V explores various interfaces between law regulatory governance and new technologies across a range of key social domains *The Routledge Companion to Environmental Ethics* Benjamin Hale, Andrew Light, Lydia Lawhon, 2022-07-29 Written for a wide range of readers in environmental science philosophy and policy oriented programs The Routledge Companion to Environmental Ethics is a landmark comprehensive reference work in this interdisciplinary field Not merely a review of theoretical approaches to the ethics of the environment the Companion focuses on specific environmental problems and other concrete issues Its 65 chapters all appearing in print here for the first time have been organized into the following eleven parts I Animals II Land III Water IV Climate V Energy and Extraction VI Cities VII Agriculture VIII Environmental Transformation IX Policy Frameworks and Response Measures X Regulatory Tools XI Advocacy and Activism The volume not only explains the nuances of important core philosophical positions but also cuts new pathways for the integration of important ethical and policy issues into environmental philosophy It will be of immense help to undergraduate students and other readers coming up to the field for the first time but also serve as a valuable resource for more advanced students as well as researchers who need a trusted resource that also offers fresh policy centered approaches

Lockdown Michael Morris, 2021-05-10 There is no going back to the old normal What you used to know as your life is no more This rebuilding phase disguised as a pandemic has been well prepared and none of this has to do with a virus or a health hazard In 2019 a great reset of the monetary economic and political system was long overdue The tension could be felt everywhere The elite the Secret World Government finally wanted to implement their New World Order They were tired of the delusion of free elections individual rights and self realization As long as we were needed as work force they played along but now that robots and AI are better and faster than us we became dispensable However neither those responsible for the old system nor their puppets in politics and the media were willing to take the blame for a major system crash They feared the rage of the masses What they needed was a scapegoat something or someone to be held responsible for the great reset a complete redesign of our way of living and for many of us the right for living And then the Chinese presented the perfect way out of their dilemma an enemy that nobody can see or fight or even understand SARS COV 2 is a political virus designed in a lab in China with Western support and knowing This is a proven fact This common cold virus did not come unforeseen There was a clear build up of events in 2019 that led to the worldwide lockdown with all its consequences ranging from intelligence reports to Bill Gates Event 201 to a Climate Emergency in Europe after faked elections Even with the easing of lockdown measures in some areas or countries this experiment is far from over It has just begun Do you think that politicians or so called scientists and journalists will voluntarily renounce their newly gained powers and the attention that they so enjoy This is a serious political social economical and spiritual crisis This is as serious as it can get This is Huxley s *Brave New World* and Orwell s 1984 all combined This is the ultimate fight Good versus Evil What do you want this world to be for yourself and
