
AP Human Geography - Chapter 18 FRQ

Define the concept of a megacity. - correct answers - population of over 10 mil

- exerts influence regionally and/or ubiquitously
- includes world's largest cities

Explain the concept of a world city using either economic or political characteristics. - correct answers - world cities are cities that exert influence far beyond national boundaries

- characteristics/examples: all world cities are media hubs and financial centers with influential stock exchanges, banks, corporate headquarters

Compare the distribution of megacities to world cities. - correct answers Megacities are classified by size (population over 10 mil) whereas world cities' statuses are based off of economic/political factors.

- most megacities reside in developing countries.
- conversely, world cities are more often found in the developed world (think of socioeconomic characteristics).

Explain an economic reason why this city has become such a large city. - correct answers Megacities were once found at the centers of large empires in powerful countries -- an example could include Tokyo, Japan.

Explain an environmental/social problem a megacity faces. - correct answers Social problems - contention between ethnic groups, joblessness, lack of infrastructure, inadequate housing

Environmental problems - severe air pollution (example: Mexico City)

Explain a political or social reason why suburbanization has occurred so prevalently in the U.S. since the 1950's. - correct answers Suburbanization became prevalent after WWII, ensuing with economic expansion, a more car-centered lifestyle, and new systems of highways to commute from home to work (to name a few). Generous mortgage loans given by the FHA allowed military families to live on their own residential property in a suburban community.

World Geography II Russell S. Spindler, 1967 World Geography Today Holt Rinehart & Winston, 2000 **Ancient Supercontinents and the Paleogeography of Earth** Lauri J. J. Pesonen, Johanna Salminen, Sten-Ake Elming, David A.D. A.D. Evans, Toni Veikkolainen, 2021-10-06

Ancient Supercontinents and the Paleogeography of Earth offers a systematic examination of Precambrian cratons and supercontinents. Through detailed maps of drift histories and paleogeography of each continent, this book examines topics related to Earth's tectonic evolution prior to Pangea, including plate kinematics, orogenic development, and paleoenvironments. Additionally, this book discusses the methodologies used, principally paleomagnetism and tectonostratigraphy, and addresses geophysical topics of mantle dynamics and geodynamo evolution over billions of years. Structured clearly with consistent coverage for Precambrian cratons, this book combines state-of-the-art paleomagnetic and geochronologic data to reconstruct the paleogeography of the Earth in the context of major climatic events such as global glaciations. It is an ideal up-to-date reference for geoscientists and geographers looking for answers to questions surrounding the tectonic evolution of Earth. Provides robust paleogeographies of Precambrian cratons based on high-quality paleomagnetic and geochronologic data and critically tested by global geological datasets. Includes links to updated databases for the Precambrian such as PALEOMAGIA and the Global Paleomagnetic Database GPMDB. Presents full-color maps of the drift histories of each continent as well as their paleogeographies. Discusses key questions regarding continental drift, the supercontinent cycle, and the geomagnetic dipole hypothesis, and analyzes paleogeography in the context of Earth's holistic evolution.

Geography Mark-Up Language Ron Lake, David Burggraf, Milan Trninic, Laurie Rae, 2004-06-07

The development of the Internet has changed the environment for Geographical Information Systems (GIS) with the emphasis shifting from analysis to the sharing of data and information over the Internet, thus making GIS more mobile and powerful. The Geography Mark-Up Language (GML) was developed as the standard language and is emerging as the foundation for Internet GIS. The Geography Mark-Up Language Foundation for the Geo Web provides a broad coverage of the use of GML in different application areas along with the technical means for building these applications. Starting from the basic concepts, this book works through all the important topics in both GML 2.0 and GML 3.0 with illustrations and worked examples to demonstrate its use. Organized into two sections, Volume I introduces readers to the new world of GML and explains how it can be used across a broad range of GIS projects. It deals with the basic concepts of XML and GML and enables readers to make decisions on the utility of GML in their projects and software acquisitions. Volume II is intended for the technical reader and answers questions on the meaning and structure of GML schema components, the development of GML application schemas, and the use of GML in connection with web services, legacy GIS, and relational databases. Contains worked examples. Covers all aspects of GML 3.0 from geometry and topology to units of measure, default styling, and coverages. Explains the Geo Web and its impact on vertical applications. Authored by leading figures in GML development. This book is a must-have.
