

- All nations control trade with other nations through various means such as tariffs and price supports for their country's firms.

**Figure 77** An example of free trade benefiting both the USA and Brazil.

## 2.2 Trade barriers

- Trade barriers are government-induced restrictions on international trade.
- Most trade barriers work on some sort of cost on trade that raises the price of the traded products.
- Apart from tariffs and quotas, there are subtler forms of trade barriers. These are non-tariff trade barriers. Examples are:
  - Complex import and export regulations
  - The need to obtain permits for using airports and harbours which delay a foreign company's attempts to distribute and sell its products.
  - Packaging laws within a country drive up costs for foreign imports.
  - One of the most effective and controversial non-tariff barriers is the imposition of product quality standards. These standards are so tough that the foreign product has no chance of meeting them.
