Investigation of Hydraulic Power Transmission Systems for V/stol Aircraft J. L. Overfield, H. R. Crawford, U.S. Army Aviation Materiel Laboratories, WESTERN CO OF NORTH AMERICA RICHARDSON TEX RESEARCH DIV., 1967 A comparison is presented between the efficiency and weight of the UH 1 helicopter gear transmission and speed reducer systems to a hydraulic power transmitting system for the UH 1 The hydraulic transmission system is composed of a turbine speed hydraulic pump and a hydraulic motor The hydraulic transmission system utilizes recently developed non Newtonian viscoelastic fluids which greatly reduce fluid friction losses increase hydraulic component volumetric efficiency and allows a substantial reduction in connecting fluid line sizes without the usual high fluid friction losses which normally result from use of small lines The results of the comparison show the hydraulic transmission system efficiency closely matches the gear system efficiency and the hydraulic transmission system is lighter than the gear system A limited aircraft effectiveness study shows that the flexibility of design which is possible with a hydraulic transmission can result in an increase in useful engine horsepower reduced infrared signature improved foreign object damage protection and a reduction in engine airframe vibration The hydraulic transmission system is based upon hydraulic components which were chosen from an industry and government agency wide search for the best hydraulic components Design data and calculated and test performance are shown for the hydraulic components Test data is shown for the fluid flow friction reducing

Global Design to Gain a Competitive Edge Xiu-Tian Yan, Benoit Eynard, William J. Ion, 2008-07-30 Recent rapid globalisation of manufacturing industries leads to a drive and thirst for rapid advancements in technological development and expertise in the fields of advanced design and manufacturing especially at their interfaces This development results in many economical benefits to and improvement of quality of life for many people all over the world Technically speaking this rapid development also create many opportunities and challenges for both industrialists and academics as the design requirements and constraints have completely changed in this global design and manufacture environment Consequently the way to design manufacture and realise products have changed as well The days of designing for a local market and using local suppliers in manufacturing have gone if enterprises aim to maintain their competitiveness and global expansion leading to further success In this global context and scenario both industry and the academia have an urgent need to equip themselves with the latest knowledge technology and methods developed for engineering design and manufacture To address this shift in engineering design and manufacture supported by the European Commission under the Asia Link Programme with a project title FASTAHEAD A Framework Approach to Strengthening Asian Higher Education in Advanced Design and Manufacture three key project partners namely the University of Strathclyde of the United Kingdom Northwestern Polytechnical University of China and the Troyes University of Technology of France organised a third international conference

Technical Manual: Design of Electric Systems for Naval Aircraft and Missiles United States. Naval Air Systems Command, **The Use of Electric Batteries for Civil Aircraft Applications** Michael Waller, 2018-12-10 The Use of Electric Batteries for Civil Aircraft Applications is a comprehensive and focused collection of SAE International technical papers covering both the past and the present of the efforts to develop batteries that can be specifically installed in commercial aircraft Recently major commercial aircraft manufacturers started investigating the possibility of using Li Ion batteries at roughly the same time that the military launched their first applications As industry events unfolded the FAA and committees from RTCA and SAE continued efforts to create meaningful standards for the design testing and certification of Li Ion battery systems for commercial aviation The

first document issued was RTCA DO 311 on Mar 13 2008 As the industry continues to develop concepts and designs for the safe utilization of the new Li Ion battery systems many are already working on designs for all electric aircraft and small two seat training aircraft are currently flying The challenges for an all electric transport category aircraft will be significant and the battery design ranks as one of the greatest The more energy that is packaged into a small area to provide for the propulsion requirements the more stringent are the design parameters and mitigation methodologies needed to make the system safe The success or failure of this endeavor lies squarely on the shoulders of the engineers and scientists developing these new systems and places additional pressure on the regulatory agencies to acquire the relevant knowledge for the creation of minimum operational performance standards for them Edited by Michael Waller an industry veteran The Use of Electric Batteries for Civil Aircraft Applications is a must read for those interested in the new power generation making its way into commercial aircraft
