

Infant observation research: What have we learned so far?

MICHAEL RUSTIN

School of Social Sciences, Media and Cultural Studies, University of East London, Docklands Campus, London E16 2RD, UK

Abstract

This paper reviews published literature in the field of psychoanalytic infant observation research, and asks, how much has so far been achieved by this work? It identifies themes, theoretical ideas, techniques, and applications which have been explored and developed in this literature. How far has the distinctive method which characterises naturalistic infant observation proved capable of generating new hypotheses, or locating hitherto unrecognised phenomena in the field of mother-infant relationships, and family dynamics more generally? The writer identifies a number of areas where significant development has taken place. His view is that a greater measure of reflection and review of research publication in infant observation and indeed child psychotherapy, would strengthen these research programmes. It would also support writing being increasingly undertaken for doctoral and masters programmes.

Introduction

In this article,¹ I review the development of psychoanalytic infant observation as a source of new knowledge, that is, as a method of research, taking account of the fact that it is only in recent years that this has been much thought of as a possibility. I consider the differences between clinical and observational methods in psychoanalysis, and what significance these may have from a research point of view. I suggest that although there are large overlaps, and continuing interactions, between clinical and observational perspectives, nevertheless a distinctive heuristic ‘object’ of infant observational study has been emerging, giving rise to new understandings and insights different from those derived from clinical practice. Finally I identify a number of fields of interest in which infant observation is proving productive as a source of new knowledge.

Clinical research in psychoanalysis

I have two primary points of reference for this paper. The first of these is the tradition of ‘clinical research’ in psychoanalysis itself, from which most of the discoveries of

Young Child Observation Simonetta M.G. The Poetics of

Psychoanalysis Mary Jacobus, 2005-12-22 *The Poetics of Psychoanalysis In the Wake of Klein* explores the literary aspects of the twentieth century psychoanalytic tradition that has come to be known as British Object Relations psychoanalysis. Focusing on Melanie Klein's legacy to psychoanalysis between the 1930s and 1970s it deals with major figures such as Riviere, Isaacs, Winnicott, Milner and Bion as well as Klein's contemporary Ella Sharpe. Mary Jacobus breaks new ground by giving a central place to the literary and aesthetic concerns of the British Object Relations tradition. Paying close attention to writing that is often side-lined by literary critics and theorists she makes fruitful connections with particular works of literature and art along with pressing contemporary issues. The three sections focus on the transitions, mediations and transformations that took place in British Object Relations psychoanalysis as Klein's ideas were developed and transformed. Situating Kleinian thought in relation to later developments and differences while making it accessible to non psychoanalytic readers. *The Poetics of Psychoanalysis* argues against the separation of British and continental traditions and for the continuing links between psychoanalysis and aesthetics. Rather than applying psychoanalytic ideas to literature and aesthetics the book traces the British Object Relations tradition as a form of proto-modernist discourse in its own right. Linked by a common thread of ideas and structured to reflect a roughly chronological trajectory individual chapters can also be read as free-standing critical essays. Aimed at literary readers this book will also be of interest to psychoanalytic practitioners and cultural theorists.
