The Cauchy Method of Residues Dragoslav S. Mitrinovic, J.D. Keckic, 1984-04-30

Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics However the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related Further the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years measure theory is used non trivially in regional and theoretical economics algebraic geometry interacts with physics the Minkowsky lemma coding theory and the structure of water meet one another in packing and covering theory quantum fields crystal defects and mathematical programming profit from homotopy theory Lie algebras are relevant to filtering and prediction and electrical engineering can use Stein spaces And in addition to this there are such new emerging subdisciplines as completely integrable systems chaos synergetics and large scale order which are almost impossible to fit into the existing classification schemes They draw upon widely different sections of mathematics This program Mathematics and Its Applications is devoted to such new interrelations as exempli gratia a central concept which plays an important role in several different mathematical and/or scientific specialized areas new applications of the results and ideas from one area of scientific endeavor into another influences which the results problems and concepts of one field of enquiry have and have had on the development of another

Belief Functions: Theory and Applications Thierry Denoeux, Marie-Hélène Masson, 2012-04-26 The theory of belief functions also known as evidence theory or Dempster Shafer theory was first

introduced by Arthur P Dempster in the context of statistical inference and was later developed by Glenn Shafer as a general framework for modeling epistemic uncertainty These early contributions have been the starting points of many important developments including the Transferable Belief Model and the Theory of Hints The theory of belief functions is now well established as a general framework for reasoning with uncertainty and has well understood connections to other frameworks such as probability possibility and imprecise probability theories This volume contains the proceedings of the 2nd International Conference on Belief Functions that was held in Compi gne France on 9 11 May 2012 It gathers 51 contributions describing recent developments both on theoretical issues including approximation methods combination rules continuous belief functions graphical models and independence concepts and applications in various areas including classification image processing statistics and intelligent vehicles

An Introduction to Abstract Algebra F. M. Hall,1972-04-06 This two volume course on abstract algebra provides a broad introduction to the subject for those with no previous knowledge of it but who are well grounded in ordinary algebraic techniques It starts from the beginning leading up to fresh ideas gradually and in a fairly elementary manner and moving from discussion of particular concrete cases to abstract ideas and methods It thus avoids the common practice of presenting the reader with a mass of ideas at the beginning which he is only later able to relate to his previous mathematical experience The work contains many concrete examples of algebraic structures Each chapter contains a few worked examples for the student these are divided into straightforward and more advanced categories Answers are provided From general sets Volume 1 leads on to discuss special sets of the integers other number sets residues polynomials and vectors A chapter on mappings is followed by a detailed study of the fundamental laws of algebra and an account of the theory of groups which takes the idea of subgroups as far as Langrange s theorem Some improvements in exposition found desirable by users of the book have been incorporated into the second edition and the opportunity has also been taken to correct a number of errors
