

Bungee Jumping (15.0%)

Suppose that the function

$$h(t) = 5t^3 - 25t^2 + 20t + 100$$

can be used to model the bungee jumper's height above the ground at time t in seconds.

Complete this table to answer the height of the jumper at a bungee jumper at given values of time t (in seconds).

t (sec)	$h(t)$
0	100
1	105
2	100
3	105
4	100
5	105
6	100
7	105

Questions

1) Describe a graph representing this data function.

Answer: Domain is 0 to 7 seconds and the height is 100 to 105 feet. There is a local minimum at $t = 2$ and $t = 4$.

2) How tall was the platform above the ground when the jumper jumped? How do you know? (with units) There are three values all equal to 100.

3) The bungee jumper went up as high as the air before first rebounding to half their initial height above the platform when jumped. Furthermore the peaks of the jumps were 100, 105 and 100 feet above the platform when jumped. How high is the jumper when the jumps were 100, 105 and 100 feet above the platform?

4) Explain the situation that the bungee jumper reaches the ground? After how many seconds does the jumper hit the ground when? (with t) at 5 seconds, the jumper was 100 feet above the ground.

5) Explain why the bungee jumper falling down at increasing height will stop. Increasing height up (100, 105) the height and then dropped down the last peak occurred at 100.

6) Since the jumper through the point $(4, 100)$ it is correct to say: "At 4 or 4 seconds, the jumper is falling." However, this measurement says "At 4 or 4.2 feet, the jumper is falling." Why?

There's a difference between $t = 4$ or 4.2 and $t = 4.2$ or 4.2. At $t = 4.2$, the height of the jumper is 100 feet. From graphically, when the height is increasing, another common point is $t = 4.2$ or 4.2.

7) Evaluate the function at $t = 7$. Does this value make sense in the context of the problem? Explain your reasoning.

At $t = 7$ is 105 ft. This doesn't make sense because the jumper is 100 feet above the ground when the jumper jumps. There are several in the problem, the jumper is 100 feet above the ground when the jumper jumps. (100 or 105 ft).

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans *Christian Home Educators' Curriculum Manual* Cathy Duffy, 1997-11 The Secondary School Mathematics Curriculum Christian R. shows in this new biography the most complete to date Thomas Harriot was a pioneer in both the figurative and literal sense Navigational adviser and loyal friend to Sir Walter Raleigh Harriot whose life was almost exactly contemporaneous to Shakespeare's took part in the first expedition to colonize Virginia in 1585 Not only was he responsible for getting Raleigh's ships safely to harbor in the New World he was also the first European to acquire a working knowledge of an indigenous language from what is today the US and to record in detail the local people's way of life In addition to his groundbreaking navigational linguistic and ethnological work Harriot was the first to use a telescope to map the moon's surface and independently of Galileo recorded the behavior of sunspots and discovered the law of free fall He preceded Newton in his discovery of the properties of the prism and the nature of the rainbow to name just two more of his unsung firsts Indeed many have argued that Harriot was the best mathematician of his age and one of the finest experimental scientists of all time Yet he has remained an elusive figure He had no close family to pass down records and few of his letters survive Most importantly he never published his scientific discoveries and not long after his death in 1621 had all but been forgotten In recent decades many scholars have been intent on restoring Harriot to his rightful place in scientific history but Arianrhod's biography is the first to pull him fully into the limelight She has done it the only way it can be done through his science Using Harriot's re-discovered manuscripts Arianrhod illuminates the full extent of his scientific and cultural achievements expertly guiding us through what makes them original and important and the story behind them Harriot's papers provide unique insight into the scientific process itself Though his thinking depended on a more natural intuitive approach than those who followed him and who achieved the lasting fame that escaped him Harriot helped lay the foundations of what in Newton's time would become modern physics Thomas Harriot A Life in Science puts a human face to scientific inquiry in the Elizabethan and Jacobean worlds and at long last gives proper due to the life and times of one of history's most remarkable minds
