Methodology: Who Needs It? Martyn Hammersley, 2010-12-14 The literature on social science methods and the issues surrounding them has grown massively and continues to increase Yet many social scientists are ambivalent about methodology For some it plays a central perhaps even an all encompassing role while for others it is desirable only in small amounts or indeed is regarded as an irrelevance as a distraction from actually doing research In this book Hammersley argues that in large part this reflects and is part of a wider problem the gradual decline of a previously influential academic model of inquiry This has occurred as a result of ideological challenges and the erosion of the institutional conditions that support academic work He defends this model spelling out the demands it places upon social scientists and examining such issues as the proper role of methodology the nature of objectivity the false idea that social scientists should be intellectuals or social critics the dialectic of academic discussion the ethics of belief and the limits of academic freedom More broadly he also questions the role of the social research within society and what it means to be a social scientist in the 21st century Hammersley s book is engagingly written and controversial It tackles the major issues of contemporary social research methodology head on and is an essential read for anyone with an interest in this field
