

Technical Report

Introduction

A technical report is a formal report designed to convey technical information in a clear and easily accessible format. It is divided into sections which allow different readers to access different levels of information. This guide explains the commonly accepted format for a technical report; explains the purposes of the individual sections; and gives hints on how to go about drafting and refining a report in order to produce an accurate, professional document.

The major focus of this technical writing course is the technical report. Just about everything you study, everything you write, is geared toward preparing you to write this final report. The early, short assignment involving instructions or descriptions and the like give you practice using headings, lists, notices, and graphics; in handling numbers and abbreviations; and of course in producing good, clear, well-organized writing.

For many students, the technical report is the longest document they've ever written. It normally involves some research; often the information comes not only from published sources in the library, but also sources outside the library, including nonpublished things such as interviews, correspondence, and video tapes. It may also be the fanciest document; it uses binding and covers and has special elements such as a table contents, title page, and graphics.

Your job in this unit then is define the following:

- *Report topic:* Decide what subject you are going to write on; narrow it as much as possible.
- *Report audience:* Define a specific person or group of people for whom you are going to write the report. Define the circumstances in which this report is needed.
- *Report purpose:* Define what the report will accomplish—what needs of the audience it is going to fulfill.
- *Report type:* Decide on the type of report—for example, technical background report, feasibility report, instructions, or some other.

You can do these in any order; for some people, it helps to start by defining an audience or a report type first. For others, beginning by picking a topic is more stimulating. Once you have defined these elements, you can start testing your report-project ideas by asking yourself these questions:

- Is there hard, specific, factual data for this topic?
- Will there be at least one or two graphics?
- Is there some realistic need for this report?

for Parallel and Distributed Computing M. Kara,J. R. Davy,D. Goodeve,1996 Abstract Machine Models have played a profound though frequently unacknowledged role in the development of modern computing systems They provide a precise definition of vital concepts allow system complexity to be managed by providing appropriate views of the activity under consideration enable reasoning about the correctness and quantitative performance of proposed problem solutions and encourage communication through a common medium of expression Abstract Models in Parallel and Distributed computing have a particularly important role in the development of contemporary systems encapsulating and controlling an inherently high degree of complexity The Parallel and Distributed computing communities have traditionally considered themselves to be separate However there is a significant contemporary interest in both of these communities in a common hardware model a set of workstation class machines connected by a high performance network The traditional Parallel Distributed distinction therefore appears under threat *Reliable Software Technologies - Ada-Europe 2009* Fabrice Kordon,Yvon

Kermarrec,2009-06-06 This book constitutes the proceedings of the 14th Ada Europe International Conference on Reliable Software Technologies Ada Europe 2009 held in Brest France on June 8 12 2009 The 19 papers presented were carefully reviewed and selected from numerous submissions Topics of interest to the conference are methods and techniques for software development and maintenance software architecture enabling technology software quality theory and practice of high integrity systems embedded systems mainstream and emerging applications ada language and technology ada and education Research in Education ,1972 Collected Works (volume 1): Published Papers Stephen Luttrell,2023-10-24

The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data

covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high dimensional data are identified and extracted The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space For instance if the data lives on a low dimensional curved manifold embedded in the data space then only the global properties of this manifold would be preserved by global linear algebra methods In practice data whose high dimensional structure is non trivial typically lives on a noisy version of a curved manifold so techniques for analysing such data must automatically handle this type of structure For instance a blurred image of a point source is described by its underlying degrees of freedom i e the position of the source and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image The basic problem is then to deduce the internal properties of this manifold by analysing examples of such images A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on There is no limit to the complexity of the types of high dimensional data that one might want to analyse These methods then need to be automated so that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically
