Hydrologic Frequency Modeling V.P. Singh, 2012-12-06 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are responsible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14-17 1986 at Louisiana State University Baton Rouge Louisiana

Risk Models and Their Estimation Stephen G. Kellison, Richard L. London, 2011 Much of actuarial science deals with the analysis and management of financial risk In this text we address the topic of loss models traditionally called risk theory by actuaries including the estimation of such models from sample data The theory of survival models is addressed in other texts including the ACTEX work entitled Models for Quantifying Risk which might be considered a companion text to this one In Risk Models and Their Estimation we consider as well the estimation of survival models in both tabular and parametric form from sample data This text is a valuable reference for those preparing for Exam C of the Society of Actuaries and Exam 4 of the Casualty Actuarial Society A separate solutions manual with detailed solutions to the text exercises is also available

Feasibility of Using Optical Power Spectrum Analysis Techniques for Automatic Feature Classification from High Resolution Thermal, Radar and Panchromatic Imagery Harvey L. Kasdan, Thomas J. Middleton, Michael A. Snyder, 1979 The objective of this study was to determine experimentally the feasibility of using optical power spectrum analysis techniques for automatic topographic feature classification from high resolution radar panchromatic and thermal imagery A data base of radar panchromatic and thermal imagery was assembled Radar and panchromatic imagery were available over the same geographical area with the same scale and perspective An optical power spectrum data base of 6 216 individual aperture samples from the three types of imagery was collected Feature analysis and decision software required in addition to standard FACEL routines was developed Using this software features and a decision rule were developed for radar imagery that achieved 90% correct classification of four classes of terrain A quantitative statistical analysis was performed to determine the effects of aperture and sensor type on the optical power spectrum based features In addition a qualitative analysis was performed in order to present examples that illustrate signature differences between radar and panchromatic imagery No single sensor performs best for all classes The results lead to the following choices for the detection of particular terrain types Urban panchromatic Water radar or panchromatic Agriculture radar and Forest thermal or radar
