Key Concept: How do astronomers determine the composition of astronomical objects (the universe)?

Remember how the spectrum lines in the spectrum of hydrogen depend on the energy levels?

- 1. A star's spectrum tells what elements are present.
- 2. A star's hydrogen spectrum shows lines.
- 3. Spectroscopy tells the spectra composition and temperature from the absorption.
- 4. Astronomers use absorption lines to identify elements.
- 5. Astronomers use absorption lines to measure temperature.
- 6. Astronomers use absorption lines to measure velocity.
- 7. Astronomers use absorption lines to measure distance.
- 8. Astronomers use absorption lines to measure mass.
- 9. Astronomers use absorption lines to measure luminosity.
- 10. Astronomers use absorption lines to measure size.
- 11. Astronomers use absorption lines to measure age.
- 12. Astronomers use absorption lines to measure rotation.
- 13. Astronomers use absorption lines to measure density.
- 14. Astronomers use absorption lines to measure pressure.
- 15. Astronomers use absorption lines to measure gravity.
- 16. Astronomers use absorption lines to measure electricity.
- 17. Astronomers use absorption lines to measure magnetism.
- 18. Astronomers use absorption lines to measure radioactivity.
- 19. Astronomers use absorption lines to measure cosmic rays.
- 20. Astronomers use absorption lines to measure dark matter.
- 21. Astronomers use absorption lines to measure dark energy.

These are the proceedings of a meeting in honour of Massimo Capaccioli at the occasion of his 70th birthday The conference aimed at summarizing the results from the main current and past digital sky survey projects and at discussing how these can be used to inspire ongoing projects and better plan the future ones Over the last decades digital sky surveys performed with dedicated telescopes and finely tuned wide field cameras have revolutionized astronomy They have become the main tool to investigate the nearby and far away universe thus providing new insights in the understanding of the galaxy structure and assembly across time the dark components of the universe as well as the history of our own galaxy They have also opened the time domain leading to a new understanding of the transient phenomena in the universe By providing public access to top quality data digital surveys have also changed the everyday practice of astronomers who have become less dependent on direct access to large observing facilities The full scientific exploitation of these surveys has also triggered significant advances in both space and ground based technology and in the field of multi object spectroscopy The various sections of this book are devoted to different relevant aspects of astrophysics in the era of digital sky surveys and include both review and shorter more focused contributions *The New Cosmos* Albrecht Unsöld, Bodo Baschek, 2013-06-29 Astronomy astrophysics and space research have witnessed an explosive development over the last few decades The new observational potential offered by space stations and the availability of powerful and highly specialized computers have revealed novel aspects of the fascinating realm of galaxies quasars stars and planets The present completely revised 5th edition of *The New Cosmos* provides ample evidence of these dramatic developments In a concise presentation which assumes only a modest prior knowledge of mathematics and physics the book gives a coherent introduction to the entire field of astronomy and

astrophysics At the same time it takes into account the art of observation and the fundamental ideas behind their interpretation Like its predecessors this edition of The New Cosmos will provide new insight and enjoyment not only to students and researchers in the fields of astronomy physics and earth sciences but also to a wide range of interested amateurs
