Hello, Sal here. I worked at the Tide Mill for a very long time. You sort of fall in love with the job, even though it's hard work. Many of the jobs at the mill are made much easier, though, by the machinery that's designed into the building. I couldn't manage without it. If you've watched the video that I made about Levers, Pulleys and Gears, you'll already know how levers help me to do my job. If you haven't watched it yet, you can find it here [\[link\]](#).

We have lots of other machinery in the Tide Mill, besides levers. We have all sorts of pulleys and gears, and these feature in the second part of my video. Pulleys and gears help to transfer power to where I need it, to move heavy objects or turn the machinery.

On the next few pages are some activities that will help you discover more about how pulleys and gears work.

Activities

"We have lots of levers, gears and pulleys all working together in the mill but do you know which piece of machinery has which mechanism? Look at the pictures below and write lever, gear or pulley underneath."

"Pulleys are a special sort of wheel, and they can do all sorts of things - they can link one piece of machinery to another, and help us to lift and move heavy objects.

The wheels are joined by a belt or rope that loops between them. A downwards pull creates an upwards pull at the other end which then lifts the weight. Look at the diagram below of our Sack Hoist. Can you label the downwards pull, the upwards force, the weight, the pulley and the belt?"

"Now that you've learned what levers, pulleys and gears look like, why not make your own pulley?"

You will need:

- An old yogurt pot or plastic cup
- A length of string or wool
- A pencil
- A cotton or ribbon spool
- Something sharp to make a hole
