 Apprenticeship dominated training and skill formation in early modern Europe Years spent learning from a skilled master  
 were a nearly universal experience for young workers in crafts and trade In England when apprenticeship reached its peak  
 as many as a third of all teenage males would serve and learn as apprentices In *The Market for Skill* Patrick Wallis shows  
 how apprenticeship helped reshape the English economy Some historians see apprenticeship as a key ingredient in the  
 industrial revolution others agree with Adam Smith in seeing it as wasteful and conservative Wallis shows that neither of  
 these perspectives is entirely accurate He offers a new account of apprenticeship and the market for skill in England  
 analyzing the records of hundreds of thousands of individual apprentices to tell the story of how apprenticeship worked and  
 how it contributed to the transformation of England Wallis details the activities of apprentices and masters the strategies of  
 ambitious parents the interventions of guilds and the decisions of town officials He shows how the system of early modern  
 apprenticeship contributed to the growth of cities the movement of workers from farms to manufacturing and the spread of  
 new technologies and productive knowledge In this groundbreaking study Wallis argues that apprenticeship succeeded  
 precisely because it was a flexible institution which allowed apprentices to change their minds and exit contracts early  
 Apprenticeship provided a vital channel for training that families could trust and that was accessible to most young people  
 whatever their background
