The book explores both fundamental and high level concepts and will serve as a manual for those in the industry while also helping beginners to understand the basic and advanced aspects of big data and cloud computing.

Feature Engineering for Machine Learning and Data Analytics Guozhu Dong, Huan Liu, 2018-03-14. Feature engineering plays a vital role in big data analytics. Machine learning and data mining algorithms cannot work without data. Little can be achieved if there are few features to represent the underlying data objects and the quality of results of those algorithms largely depends on the quality of the available features. *Feature Engineering for Machine Learning and Data Analytics* provides a comprehensive introduction to feature engineering including feature generation feature extraction feature transformation feature selection and feature analysis and evaluation. The book presents key concepts methods examples and applications as well as chapters on feature engineering for major data types such as texts images sequences time series graphs streaming data software engineering data Twitter data and social media data. It also contains generic feature generation approaches as well as methods for generating tried and tested hand crafted domain specific features. The first chapter defines the concepts of features and feature engineering offers an overview of the book and provides pointers to topics not covered in this book. The next six chapters are devoted to feature engineering including feature generation for specific data types. The subsequent four chapters cover generic approaches for feature engineering namely feature selection feature transformation based feature engineering deep learning based feature engineering and pattern based feature generation and engineering. The last three chapters discuss feature engineering for social bot detection software management and Twitter based applications respectively. This book can be used as a reference for data analysts big data scientists data preprocessing workers project managers project developers prediction modelers professors researchers graduate students and upper level undergraduate
