Lectures On String Theory Lecture Notes In Physics Hardcover:

Lectures on String Theory Dieter Lüst, Stefan Theisen, 2014-04-17 This book provides a self contained introduction to string theory at present one of the most exciting and fastest growing areas in theoretical high energy physics Pedagogical in character it introduces modern techniques and concepts such as conformal and superconformal field theory Kac Moody algebras etc stressing their relevance and application to string theory rather than the formal aspects The reader is led from a basic discussion of the classical bosonic string to the construction of four dimensional heterotic string models an area of current research The so called covariant lattice construction is discussed in detail Being conceptually very simple the book serves to exemplify the relevant features of other methods of arriving at four dimensional string theories It is also shown how one derives a low energy field theory from string theory thereby making contact with conventional point particle physics

Strings and Fundamental Physics Marco Baumgartl, Ilka Brunner, Michael Haack, 2012-04-05 The basic idea simple and revolutionary at the same time to replace the concept of a point particle with a one dimensional string has opened up a whole new field of research Even today four decades later its multifaceted consequences are still not fully conceivable Up to now string theory has offered a new way to view each particle as different excitations of the same fundamental object It has celebrated success in discovering the graviton in its spectrum and it has naturally led scientists to posit space times with more than four dimensions which in turn has triggered numerous interesting developments in fields as varied as condensed matter physics and pure mathematics This book collects pedagogical lectures by leading experts in string theory introducing the non specialist reader to some of the newest developments in the field The carefully selected topics are at the cutting edge of research in string theory and include new developments in topological strings or AdS CFT dualities as well as newly emerging subfields such as doubled field theory and holography in the hydrodynamic regime The contributions to this book have been selected and arranged in such a way as to form a self contained graduate level textbook

Progress In String Theory: Tasi 2003 Lecture Notes Juan M Maldacena, Kalyana T Mahanthappa, 2005-07-12 Intended mainly for advanced graduate students in theoretical physics this comprehensive volume covers recent advances in string theory and field theory dualities It is based on the annual lectures given at the School of the Theoretical Advanced Study Institute 2003 a traditional event that brings together graduate students in high energy physics for an intensive course given by leaders in their fields The first lecture by Paul Aspinwall is a description of branes in Calabi Yau manifolds which includes an introduction to the modern ideas of derived categories and their relation to D branes Juan Maldacena s second lecture is a short introduction to the AdS CFT correspondence with a short discussion on its plane wave limit Tachyon condensation for open strings is discussed in the third lecture by Ashoke Sen while Eva Silverstein provides a useful summary of the various attempts to produce four dimensional physics out of string theory and M theory in the fourth lecture Matthew Strassler s fifth lecture is a careful discussion of a theory that has played a very important role in recent developments in string theory a quantum field

theory that produces a duality cascade which also has a large N gravity description The sixth lecture by Washington Taylor explains how to perform perturbative computations using string field theory The written presentation of these lectures is detailed yet straightforward and they will be of great use to both students and experienced researchers in high energy theoretical physics

String Theory and the Real World C. Bachas, 2008 This book is a collection of lectures given in July 2007 at the Les Houches Summer School on String Theory and the Real World From particle physics to astrophysics Provides a pedagogical introduction to topics in String Theory and Cosmology Addresses each topic from the basis to the most recent developments Covers the lectures by internationally renowned and leading experts

Naturalness, String Landscape and Multiverse Arthur Hebecker, 2021-03-26 This book presents a string theoretic approach to new ideas in particle physics also known as Physics Beyond the Standard Model and to cosmology The concept of Naturalness and its apparent violation by the low electroweak scale and the small cosmological constant is emphasized It is shown that string theory through its multitude of solutions known as the landscape offers a partial resolution to these naturalness problems as well as suggesting more speculative possibilities like that of a multiverse The book is based on a one semester course as such it has a pedagogical approach is self contained and includes many exercises with solutions Notably the basics of string theory are introduced as part of the lectures These notes are aimed at graduate students with a solid background in quantum field theory as well as at young researchers from theoretical particle physics to mathematical physics This text also benefits students who are in the process of studying string theory at a deeper level In this case the volume serves as additional reading beyond a formal string theory course

CERN Courier, 2014

String Theory and Fundamental Interactions Maurizio Gasperini, Jnan Maharana, 2007-11-08 This book has been prepared to celebrate the 65th birthday of Gabriele Veneziano and his retirement from CERN in September 2007 This retirement certainly will not mark the end of his extraordinary scientific career in particular he will remain on the permanent staff of the Collège de France in Paris but we believe that this important step deserves a special celebration and an appropriate recognition of his monumental contribution to physics Our initial idea of preparing a volume of Selected papers of Professor Gabriele Veneziano possibly with some added commentary was dismissed when we realized that this format of book very popular in former times has become redundant today because of the full digitalization of all important physical journals and their availability online in the electronic archives We have thus preferred an alternative and unconventional but probably more effective form of celebrating Gabriele's birthday a collection of new papers written by his main collaborators and friends on the various aspects of theoretical physics that have been the object of his research work during his long and fruitful career

Progress in String Theory Juan Martín Maldacena, 2005 D Branes on Calabi Yau manifolds Paul S Aspinwall Lectures on AdS CFT Juan M Maldacena Tachyon dynamics in open string theory Ashoke Sen TASI PITP ISS lectures on moduli and microphysics Eva Silverstein The duality cascade Matthew J Strassler Perturbative computations in string field theory Washington Taylor
