*Natural Dam Lake Cuejdel in the Stânişoarei Mountains, Eastern Carpathians* Alin Miha-Pintilie, 2018-03-27 This book presents an interdisciplinary study of Lake Cuejdel one of the youngest natural dam lakes in Romania Even though the overall study has a strong geographical approach it also includes limnological and hydrological studies The lake was formed in two phases Initially a small lake appeared in 1978 and then in 1991 a major landslide occurred that blocked the Cuejdel brook and a larger lake was formed The book covers various topics including the lacustrine basin the geological setting analyses of the physical chemical parameters water dynamics flora and fauna and lake management This book is of interest for those working in freshwater science and ecology physical geography hydrology and limnology

Landslide Analysis and Early Warning Systems Benni Thiebes, 2012-01-21 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based

applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas
