Echarri, C.A. Brebbia, 2018-02-01 Studies repairs and maintenance of heritage architecture are becoming increasingly important in modern society The rapid growth recently experienced in many regions of the world has added a particular urgency to the need to preserve our built cultural heritage

This requires the collaboration of different parties including not only architects engineers and scientists but also artists socio economic professionals and all other stakeholders to ensure the effective integration of the rehabilitated buildings within the community Comprising specially selected papers this book address a series of topics related to the historical aspects and reuse of heritage architecture as well as technical issues on the structural integrity of different types of buildings Restoration processes require the appropriate characterisation of materials the modes of construction and the structural behaviour of the building Modern computer simulation can provide accurate results demonstrating the stress state of the building and possible failure mechanisms affecting its stability Equally important are studies related to their dynamic and earthquake behaviour aiming to provide an assessment of the seismic vulnerability of heritage buildings Of particular interest is the need for Heritage Building rehabilitation to conform to energy consumption reduction goals framed within climate change initiatives It is necessary to encourage actions to improve energy efficiency harmonised with both appropriate amounts of investment and transnational commitments to reduce greenhouse gas emissions

Frontiers in Built Environment, editor's

picks 2023 Izuru Takewaki,2024-03-19 Dear readers of Frontiers in Built Environment As the Field Chief Editor for Frontiers

in Built Environment I am happy to present this curated selection of papers that have made a significant impact within our community. Among the large number of submissions that we received, these 14 papers represent some of the best published in 2023, the year when the journal attained its first impact factor. With many high quality papers to consider in selecting these 14 articles, we faced the challenging task of how to include papers from across the 15 distinct sections of the journal whilst at the same time achieving a sense of cohesion to the ebook overall. However, amidst this diversity, we noticed a convergence in our highest quality papers around three pivotal themes that are central to our journal's mission: resilience, sustainability, and technology. In this way, despite the broad range of topics covered within both our journal and this selection, this ebook can truly be considered representative of our journal as a whole. These carefully chosen papers encompass high quality original research and comprehensive reviews which also embody the ethos of innovation and excellence that defines our journal. As the Field Chief Editor, I am thankful to all authors who have enriched our journal with their high caliber work. I extend sincere appreciation to the dedicated efforts of our editors and reviewers whose invaluable contributions have been instrumental in shaping *Frontiers in Built Environment* in 2023. *Insights: Frontiers in Built Environment* Zhen Chen, Akira

Matsumoto, Joan Ramon Casas, Vagelis Plevris, George Tsiatas, Hongling Guo, Yongkui Li, Sakdirat Kaewunruen, 2024-04-08. We are now entering the third decade of the 21st Century and especially in recent years, the achievements made by researchers and professionals have been exceptional, leading to major advancements in the fast growing field of the Built Environment. *Frontiers* has organised a series of Research Topics to highlight the latest advancements in research across the field of Built Environment with articles from the members of our accomplished Editorial Boards. Quantitative analysis of neuroanatomy

Julian M L Budd, Hermann Cuntz, Stephen J Egle, Patrik Krieger, 2016-03-22. The true revolution in the age of digital neuroanatomy is the ability to extensively quantify anatomical structures and thus investigate structure function relationships in great detail. Large scale projects were recently launched with the aim of providing infrastructure for brain simulations. These projects will increase the need for a precise understanding of brain structure e.g. through statistical analysis and models. From articles in this Research Topic, we identify three main themes that clearly illustrate how new quantitative approaches are helping advance our understanding of neural structure and function. First, new approaches to reconstruct neurons and circuits from empirical data are aiding neuroanatomical mapping. Second, methods are introduced to improve understanding of the underlying principles of organization. Third, by combining existing knowledge from lower levels of organization, models can be used to make testable predictions about a higher level organization where knowledge is absent or poor. This latter approach is useful for examining statistical properties of specific network connectivity when current experimental methods have not yet been able to fully reconstruct whole circuits of more than a few hundred neurons.

Hatch,Bjorn Olsen,Thomas E. Van Dyke,Monzur Murshed,Nancy Lane,2023-08-31 Substantial progress has been made in defining genes and proteins involved in development maintenance and regeneration of teeth and bones This knowledge has improved strategies for diagnosing and treating mineralized tissue diseases Existing data provide credence for these genes proteins having roles beyond those attributed to mineralized tissues For example they may affect systemic metabolic activity and glucose tolerance One example is fibroblast growth factor 23 Fgf23 a hormone secreted by osteocytes suppressing phosphate reabsorption into the blood stream and vitamin D synthesis in the kidney Many other bone associated proteins perhaps acting as endocrine factors are reported to act at distant sites to alter metabolic activity However there remains substantial uncertainty as to whether bone itself functioning as an endocrine organ and or factors secreted by bone could modulate metabolic activity Such information should be of value toward informing clinical strategies to treat mineralized tissue and metabolic disorders
