Johann C. Dauer,2021-11-02 This book investigates Unmanned Aircraft Systems UAS with a payload capacity of one metric
ton for transportation The authors provide a large variety of perspectives from economics to technical realization With the
focus on such heavy lift cargo UAS the authors consider recently established methods for approval and certification which
they expect to be disruptive for unmanned aviation In particular the Specific Operations Risk Assessment SORA and its
impact on the presented technological solutions and operational concepts are studied Starting with the assumption of an
operation over sparsely populated areas and below common air traffic diverse measures to further reduce operational risks
are proposed Operational concepts derived from logistics use cases set the context for an in depth analysis including aircraft
and system design safe autonomy as well as airspace integration and datalinks Results from simulations and technology
demonstrations are presented as a proof of concept for solutions proposed in this book **But Will It Fly?** Iver P.
Cooper,2025-09-17 Conventional aircraft today are propelled by the action of propellers or jets and powered by the internal
combustion of petroleum fuels in piston turboprop or jet engines But other power sources powerplants and propulsion
devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries The power
sources considered include human muscles steam batteries nuclear reactors and hydrogen fuel and the propulsion devices
include sails oars flapping wings rockets and cycloidal propellers This meticulously researched book presents the history of
these unconventional aerial power and propulsion systems explains the underlying science and technology behind them and
assesses the crucial question of practicality **Overhaul Manual** AVCO. Lycoming Division,1974 **Overhaul Manual**
