Functional Molecular Silicon Compounds II David Scheschkewitz, 2014-07-08 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere The coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented Discussion of possible future research directions in the area is welcomed Review articles for the individual volumes are invited by the volume editors Readership research scientists at universities or in industry graduate students Special offer for all customers who have a standing order to the print version of Structure and Bonding we offer free access to the electronic volumes of the Series published in the current year via SpringerLink

The Nature of the Mechanical Bond Carson J. Bruns, J. Fraser Stoddart, 2016-11-07 The story is told by THE inventor pioneer master in the field and is accompanied by amazing illustrations it will become an absolute reference and a best seller in chemistry Alberto Credi the

great opus on the mechanical bond A most impressive undertaking Jean Marie Lehn Congratulations to co author J Fraser Stoddart a 2016 Nobel Laureate in Chemistry In molecules the mechanical bond is not shared between atoms it is a bond that arises when molecular entities become entangled in space Just as supermolecules are held together by supramolecular interactions mechanomolecules such as catenanes and rotaxanes are maintained by mechanical bonds This emergent bond endows mechanomolecules with a whole suite of novel properties relating to both form and function They hold unlimited promise for countless applications ranging from their presence in molecular devices and electronics to their involvement in remarkably advanced functional materials The Nature of the Mechanical Bond is a comprehensive review of much of the contemporary literature on the mechanical bond accessible to newcomers and veterans alike Topics covered include Supramolecular covalent and statistical approaches to the formation of entanglements that underpin mechanical bonds in molecules and macromolecules Kinetically and thermodynamically controlled strategies for synthesizing mechanomolecules Chemical topology molecular architectures polymers crystals and materials with mechanical bonds The stereochemistry of the mechanical bond mechanostereochemistry including the novel types of dynamic and static isomerism and chirality that emerge in mechanomolecules Artificial molecular switches and machines based on the large amplitude translational and rotational motions expressed by suitably designed catenanes and rotaxanes This contemporary and highly interdisciplinary field is summarized in a visually appealing image driven format with more than 800 illustrations covering both fundamental and applied research The Nature of the Mechanical Bond is a must read for everyone from students to experienced researchers with an interest in chemistry's latest and most non canonical bond Dynamical Astrochemistry David A Williams, Thomas W Hartquist, Jonathan M C Rawlings, Cesare Cecchi-Pestellini, Serena Viti, 2017-12-13 Astrochemistry is a well established interdisciplinary subject and the methods for describing time dependent chemistry in static or slowly changing regions of interstellar space have been well developed over many years Existing astrochemical books normally describe the subject in terms of chemistry in static or slowly varying astronomical situations but the most significant astronomical regions are those in which the physical conditions change on timescales that are comparable to or shorter than chemical timescales Written by leading experts in this area this is the first book specifically devoted to the astrochemistry of dynamically evolving astronomical regions It provides a comprehensive description of this important area of science stressing in particular the methods that have been developed for specific purposes It will be of interest to researchers in astrochemistry including both chemists and physicists and could form the basis of a postgraduate course for research students in chemistry and physics *Carrion Ecology, Evolution, and Their Applications* M. Eric Benbow, Jeffery K. Tomberlin, Aaron M. Tarone, 2025-07-17 The first edition of Carrion Ecology Evolution and Their Applications brought together multiple scientific disciplines to shed light on the importance of carrion within the context of ecology and evolutionary biology and through applications ranging from human mass disasters to habitat ecosystem conservation This

second edition builds upon this foundation to include a huge amount of new research consisting of 33 chapters 9 brand new and the remaining 24 substantially updated and expanded One of the most significant changes for this edition is the coverage of aquatic ecosystems both freshwater and marine The book is now represented by 73 authors from eight countries incorporating more diverse perspectives and engagement into this multidisciplinary and expanding science The resulting new edition showcases a broader scope of topics geographic areas ecosystems and history of carrion ecology evolution and their applications for humanity It provides the most comprehensive resource on carrion from all ecosystems of the world The student academic and professional will find this book insightful providing new insights for the fields of molecular ecology microbiology entomology population biology community and ecosystem ecology as well as applications in forensics and human and environmental health

Nano-(Bio)Catalysis in Lignocellulosic Biomass Valorization Rafael Luque, Christophe Len, Konstantinos Triantafyllidis, 2019-03-01 The valorization of lignocellulosic biomass in the form of forest and agricultural wastes industrial processing side streams and dedicated energy crops toward chemicals fuels and added value products has become a major research area with increasing exploitation potential The efficient and tailored depolymerization of biomass or its primary structural components hemicellulose cellulose and lignin to platform chemicals i.e. sugars phenolics furans ketones organic acids etc is highly dependent on the development of novel or modified chemo and bio catalytic processes that take into account the peculiarities and recalcitrance of biomass as feedstock compared for example to petroleum fractions The present Research Topic in Frontiers in Chemistry Section of Green and Sustainable Chemistry entitled Nano bio catalysis in lignocellulosic biomass valorization aims to further contribute to the momentum of research and development in the bio catalytic conversion of biomass by featuring original research papers as well as two review papers authored and reviewed by experts in the field The Research Topic addresses various representative reactions

and processes in biomass valorization highlighting the importance of developing novel efficient and stable nano bio catalysts with tailored properties according to the nature of the reactant feedstock and the targeted products
