Precambrian Geotectonics in the Himalaya provides a deep overview on geology and tectonics of the Precambrian domains of the Himalaya. Authored by an expert with over five decades of work in Precambrian Himalaya, the book studies Window zones to provide a scope for understanding Precambrian deformation effects. The book specifically covers the holistic Precambrian geotectonic of the terrain and revises the subduction back thrusting model of the Cenozoic evolution. Considering Precambrian regional events are not clearly recognised or visualised in many sectors due to overlapping crystallines, this book details a Precambrian geotectonic framework of the terrain on which the Himalayan event evolved. Precambrian Geotectonics in the Himalaya is a necessary reference for Earth scientists, exploration and hazard management scientists, professors and students who carry out research that requires a comprehensive picture of the Precambrian Himalaya and in totality with the adjacent peninsula. Features comprehensive data gathered from decades of research on the Himalaya. Includes numerous detailed case studies that allow readers to comprehensively consider the data presented. Describes the Precambrian tectonostratigraphic history of the Himalayan terrain.
