[Building a Dedicated GSM GPS Module Tracking System for Fleet Management](#) Franjeh El Khoury, Antoine Zgheib, 2018-01-31. This book shows how to build a INFelecPHY GPS Unit IEP GPS tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1. HTTP and HTTPS to navigate, download and upload in real-time the information to a web server; 2. FTTP and FTTSP to handle in a non-real-time the files to the web application; and 3. SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad, and screen.

[Microcontroller Education](#) Dimosthenis E. Bolanakis, 2022-05-31. Microcontroller education has experienced tremendous change in recent years. This book attempts to keep pace with the most recent technology while holding an opposing attitude to the 'No Need to Reinvent the Wheel' philosophy. The choice strategies are in agreement with the employment of today's flexible and low-cost Do It Yourself (DIY) microcontroller hardware along with an embedded C programming approach able to be adapted by different hardware and software development platforms. Modern embedded C compilers employ built-in features for keeping programs short and manageable and hence speeding up the development process. However, those features eliminate the reusability of the source code among diverse systems. The recommended programming approach relies on the motto 'Code More to Learn Even More' and directs the reader toward a low-level accessibility of the microcontroller device. The examples addressed herein are designed to meet the demands of Electrical/Electronic Engineering discipline where the microcontroller learning processes definitely bear the major responsibility. The programming strategies are in line with the two virtues of C programming language: that is, the adaptability of the source code and the low-level accessibility of the hardware system.
