

Chapter 1- Economics: Foundations and Models

Offshoring (outsourcing)- Process of firms producing goods and services outside of their home country which is usually motivated by lower wages.

- High-technology manufacturing, research and development and IT systems analysis are being outsourced at a 75 per cent lower salary.

Business-process outsourcing (BPO)- contracting of non-primary business activities and functions (payroll, human resources (HR), accounting and customer/call centre relations) to a third-party provider.

- IT-BPO sector generates over \$15 billion per year for the Philippines.
 - Philippines are the largest call centre operators in the world.

Economics- Study of the choices made by society and people to attain their unlimited wants. Given their scarce resources.

Scarcity- Situations which unlimited wants exceed the limited resources available to fulfil those wants.

Resources- Factors of production or inputs used to produce goods and services.

Economic models- Simplified versions of reality used to analyse real-world economic situations.

- Economic ideas:
 - *People are rational; people respond to incentives; optimal decisions are made at the margin.*
- Fundamental questions economies must answer:
 - *What goods and service will be produced? How will the goods and services be produced? Who will receive the goods and services?*

1.1- Three Key Economic Ideas

Market- Group of buyers and sellers of a good or service and the institution or arrangement by which they come together to trade.

People are rational:

- The assumption that, consumers and firms use as much of the available information as they can to achieve their goals, made by economists.
- 'Rational individuals,' weigh the benefits and costs of each action choosing an action only if the benefits outweigh the costs.
- Acting rational based on information available to them.

People respond to economic incentives:

- Consumers and firms consistently respond to economic incentives.
- The Pharmaceutical Benefits Scheme (PBS), an Australian government initiative, exemplifies that the if medicines were free there would be little incentive for patients or doctors to use medicines wisely.

Optimal decisions are made at the margin:

- **Marginal-** Extra or additional benefit or cost of a decision.
 - Marginal benefits are the maximum amount a consumer will pay for an additional good or service. The marginal benefit generally decreases as consumption increases. The marginal cost of production is the change in cost that comes from making more of something.
- **Marginal cost (MC)-** Additional cost incurred in the produce of one more unit of a good or service.
- **Marginal benefit (MB)-** Maximum amount a consumer is willing to pay for an additional good or service. The additional satisfaction or utility that consumer received when the additional good or service is purchased.

Bulletin Oklahoma. State Dept. of Education, 1924 **Essentials of International Economics** Robert C. Feenstra, Alan M. Taylor, 2010-12-27 Revision of the 2008 publication International economics condensed to fifteen chapters and designed for single semester courses combining international trade and macroeconomics Second ed also available in a 22 chapter version titled International economics Essentials of Reservoir Engineering Pierre Donnez, 2012 Contents of volumes 1 and 2 give a general view of the essential material knowledge for students and professionals Opportunity for deeper investigation is available from the extensive complementary references featured **Principles of Economics** Edwin Robert Anderson Seligman, 1923 **Pricing Carbon Emissions** Aviel Verbruggen, 2021-06-15 Pricing Carbon Emissions provides an economic critique on the utopian idea of a uniform carbon price for addressing rising carbon emissions exposing the flaws in the economic propositions with a key focus on the EU s Emissions Trading System ETS After an Executive

Summary of the contents the chapters build up understanding of orthodox economics role in protecting the neoliberal paradigm A salient case the ETS is successful in shielding the Business as Usual activities of the EU s industry however this book argues that the system fails in creating innovation for decarbonizing production technologies A subsequent political economy analysis by the author points to the discursive power of giant fossil fuel and electricity companies keeping up a facade of Cap and Trade utopia and hiding the reality of free permit donations and administrative price control concealing financial bills mostly paid by household electricity customers The twilights between reality and utopia in the EU s ETS are exposed concluding an immediate end of the system is necessary for effective and just climate policy The work argues that the proposition of shifting to a global uniform carbon tax is equally utopian In practice a uniform price applied on heterogeneous cases is not a source of benefits but one of ad hoc adjustments exceptions and exemptions Carbon pricing does not induce innovation however assumed by the economic models used by IPCC for advising global climate policy Thus it is persuasively demonstrated by the author that these schemes are doomed to failure and room and resources need to be created for more effective and just climate politics The book s conclusion is based on economic arguments complementing the critique of political scientists This book is written for a broad audience interested in climate policy eager to understand why decarbonizing progress is slow as it is It marks a significant addition to the literature on climate politics carbon pricing and the political economy of the environment more broadly The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
