Statistics for Terrified Biologists Helmut F. van Emden, 2019-08-19 Makes mathematical and statistical analysis understandable to even the least math minded biology student This unique textbook aims to demystify statistical formulae for the average biology student Written in a lively and engaging style Statistics for Terrified Biologists 2nd Edition draws on the author's 30 years of lecturing experience to teach statistical methods to even the most guarded of biology students It presents basic methods using straightforward jargon free language Students are

taught to use simple formulae and how to interpret what is being measured with each test and statistic while at the same time learning to recognize overall patterns and guiding principles Complemented by simple examples and useful case studies this is an ideal statistics resource tool for undergraduate biology and environmental science students who lack confidence in their mathematical abilities Statistics for Terrified Biologists presents readers with the basic foundations of parametric statistics the t test analysis of variance linear regression and chi square and guides them to important extensions of these techniques It introduces them to non parametric tests and includes a checklist of non parametric methods linked to their parametric counterparts The book also provides many end of chapter summaries and additional exercises to help readers understand and practice what they ve learned Presented in a clear and easy to understand style Makes statistics tangible and enjoyable for even the most hesitant student Features multiple formulas to facilitate comprehension Written by of the foremost entomologists of his generation This second edition of Statistics for Terrified Biologists is an invaluable guide that will be of great benefit to pre health and biology undergraduate students Survival Analysis John P. Klein, Melvin L. Moeschberger, 2013-06-29 Applied statisticians in many fields must frequently analyze time to event data While the statistical tools presented in this book are applicable to data from medicine biology public health epidemiology engineering economics and demography the focus here is on applications of the techniques to biology and medicine The analysis of survival experiments is complicated by issues of censoring where an individual s life length is known to occur only in a certain period of time and by truncation where individuals enter the study only if they survive a sufficient length of time or individuals are included in the study only if the event has occurred by a given date The use of counting process methodology has allowed for substantial advances in the statistical theory to account for censoring and truncation in survival experiments This book makes these complex methods more accessible to applied researchers without an advanced mathematical background The authors present the essence of these techniques as well as classical techniques not based on counting processes and apply them to data Practical suggestions for implementing the various methods are set off in a series of Practical Notes at the end of each section Technical details of the derivation of the techniques are sketched in a series of Technical Notes This book will be useful for investigators who need to analyze censored or truncated life time data and as a textbook for a graduate course in survival analysis The prerequisite is a standard course in statistical methodology This book offers an excellent course in survival analysis for **Nonlinear Filters for Image Processing** Edward R.
