*Anatomical Forms*  
 Whitney Sperrazza, 2025-06-10  
 Demonstrates how early modern women writers such as Margaret Cavendish and Hester Pultner wielded poetics as a tool for scientific work. *Anatomical Forms* excavates the shared material practices of women's poetic work and anatomical study in early modern England. Asserting that poetry is a dimensional technology, Whitney Sperrazza demonstrates how women writers wielded poetics as a tool for scientific work in order to explore and challenge rapid developments in anatomy and physiology. In the sixteenth and seventeenth centuries, anatomists were actively exploring the best ways to represent bodies in texts to translate the work of the dissection room into the pages of books. When we recognize Renaissance anatomy as fundamentally a book-making project, Sperrazza insists, we find a complex and expansive history of anatomy in the pages of women's poetry. Women poets have long been absent from histories of literature and science, but by shifting our focus from content to form, Sperrazza reveals complex engagements with questions on corpse preservation, dissection, obstetrics, and gynecology, and skin theory in the poetry of Margaret Cavendish, Aemilia Lanyer, Mary Wroth, Mary Sidney Herbert, and Hester Pultner. Through close formal analysis and original research on early modern anatomy treatises, *Anatomical Forms* weaves together critical conversations in poetics, book history, the history of science, and women's writing. Sperrazza challenges her readers to imagine science differently to understand that science might not always look like we expect it to look, and in the process brings into focus a feminist history of poetic form centered on material practice.

 NCERT Class 7 Science Summary Notes      Quantity and Measure in Hegel's 'Science of Logic'  
 Stephen Houlgate, 2021-10-21  
 Hegel on Being provides an authoritative treatment of Hegel's entire logic of being. Stephen Houlgate presents the *Science of Logic* as an important and neglected text within Hegel's oeuvre that should hold a more significant place in the history of philosophy. In the *Science of Logic*, Hegel set forth a distinctive conception of the most fundamental forms of being through ideas on quality, quantity, and measure. Exploring the full trajectory of Hegel's logic of being from quality to measure, this two-volume work by a preeminent Hegel scholar situates Hegel's text in relation to the work of Plato, Aristotle, Descartes, Spinoza, Kant, and Frege. Volume II, *Quantity and Measure in Hegel's Science of Logic*, continues the discussion of Hegel's logic of being and considers all aspects of quantity and measure in his logic, including his basic categories of being, writings on calculus, philosophy of mathematics, as well as a comparative

study of Hegel and Frege's approach to logic      Drawing as a Way of Knowing in Art and Science Gemma Anderson-Tempini, 2017-10-01 In recent history the arts and sciences have often been considered opposing fields of study but a growing trend in drawing research is beginning to bridge this divide Gemma Anderson's *Drawing as a Way of Knowing in Art and Science* introduces tested ways in which drawing as a research practice can enhance morphological insight specifically within the natural sciences mathematics and art Inspired and informed by collaboration with contemporary scientists and Goethe's studies of morphology as well as the work of artist Paul Klee this book presents drawing as a means of developing and disseminating knowledge and of understanding and engaging with the diversity of natural and theoretical forms such as animal vegetable mineral and four dimensional shapes Anderson shows that drawing can offer a means of scientific discovery and can be integral to the creation of new knowledge in science as well as in the arts      **Science, Man and Morals** W. Halliday, 2006-06-19 Halliday's investigations into grammatical metaphor take us deeply into the way we construct and expand meanings starting with representations of concrete experienced events and ending with theoretical worlds populated by abstract entities linked through generalized relations and causalities He finds these processes most strikingly in the development of the modern sciences that have historically created robust virtual worlds of theory from observable material events He sees the same processes of grammatical metaphor as children learn to participate in our built symbolic environment particularly as they are introduced to these meaning systems in schools an institution designed expressly for that purpose Professor Charles
