Almost Periodic Type Solutions Marko Kostić, 2025-03-03 Maybe for the first time in the existing literature we investigate here the almost periodic type solutions to the abstract Volterra difference equations depending on several variables We also investigate the generalized almost periodic type sequences and their applications in a rather detailed manner as well as many new important spaces of metrically generalized almost periodic type spaces of sequences and functions We essentially apply some results from the theory of C regularized solution operator families to the abstract Volterra integro differential difference equations contributing also to the theory of fractional calculus and fractional differential equations The theory of abstract Volterra integro differential equations and the theory of abstract Volterra difference equations are very attractive fields of research of many authors The almost periodic features and the asymptotically almost periodic features of solutions to the abstract Volterra differential difference equations in Banach spaces have been sought in many research articles published by now The main aim of this monograph is to continue the work collected in my monographs published with W de Gruyter recently by providing several new results about the existence and uniqueness of almost periodic type solutions to the abstract Volterra integro differential difference equations which could be solvable or unsolvable with respect to the highest derivative order We would like to particularly emphasize that this is probably the first research monograph devoted to the study of almost periodic type solutions to the abstract Volterra difference equations depending on several variables We also consider here many new important spaces of metrically generalized almost periodic type spaces of sequences and functions and their almost automorphic analogues It is also worth noting that this is probably the first research monograph which concerns the generalized almost periodic type sequences and their applications in a rather detailed manner for the first time in the existing literature we also present here some applications of results from the theory of C regularized solution operator families to the abstract Volterra difference equations Fractional calculus and discrete fractional calculus are rapidly growing fields of theoretical and applied mathematics which are incredibly important in modeling of various real phenomena appearing in different fields like aerodynamics rheology interval valued systems chaotic systems with short memory and image encryption and discrete time recurrent neural networks Many important research results regarding the abstract fractional differential equations and the abstract fractional difference equations in Banach spaces have recently been obtained by a great number of authors from the whole world In this monograph we also contribute to the theories of discrete fractional calculus fractional differential difference equations and multi dimensional Laplace transform Although the monograph is far from being complete we have decided to quote almost eight hundred and fifty research articles which could be of some importance to the interested readers for further developments of the theory established here

Surveying and Land Information Systems, 1998 *Comfort Control in Buildings* María del Mar Castilla, José Domingo Álvarez, Francisco Rodríguez, Manuel Berenguel, 2014-06-30 The aim of this book is to research comfort control inside buildings and how this can be achieved through low energy consumption It presents a comprehensive exploration of the

design development and implementation of several advanced control systems that maintain users comfort thermal and indoor air quality whilst minimizing energy consumption The book includes a detailed account of the latest cutting edge developments in this area and presents several control systems based on Model Predictive Control approaches Real life examples are provided and the book is supplemented by illustrations tables all of which facilitate understanding of the text Energy consumption in buildings residential and non residential represents almost the half of the total world energy consumption and they are also responsible for approximately 35% of CO₂ emissions For these reasons the reduction of energy consumption associated with the construction and use of buildings and the increase of energy efficiency in their climatic refurbishment are frequently studied topics in academia and industry As the productivity of users is directly related to their comfort a middle ground needs to be found between comfort of users and energy efficiency In order to achieve this it is necessary to develop innovation and technology which can provide comfortable environments with minimum energy consumption This book is intended for researchers interested in control engineering energy and bioclimatic buildings and for architects and process control engineers It is also accessible to postgraduate students embarking on a career in this area particularly those studying architecture

Organic/Inorganic Hybrid Materials - 2007: Volume 1007 Christophe Barbé, 2008-05-28 The field of organic inorganic hybrids has evolved significantly providing materials with increasing architectural complexities and functionalities Scientists involved in this field are gradually moving from building materials using a classical molecular approach e g polymerization to assembling materials on the nanoscale using a variety of innovative strategies which can vary from the assembly of DNA motifs to the formation of mesoporous materials by spinodal decomposition or the use of nanoparticles or oxoclusters as nanobuilding blocks for building complex structures such as nacre like transition metal oxides This precise control over the materials architecture also adds functionality to the hybrid materials whether it is for designing special membranes for phase separation and chromatography or thin films for photonic or magnetic applications This book presents contributions from researchers worldwide and

discusses organosiloxane based materials mesoporous materials and films layered materials surface and interface modification and characterization controlled release and biological applications nanoparticles synthesis and assembly nanocomposites and new concepts
