General and Specific Mental Abilities Dennis J. McFarland, 2020-05-07 The history of testing mental abilities has seen the dominance of two contrasting approaches psychometrics and neuropsychology These two traditions have different theories and methodologies but overlap considerably in the tests they use Historically

psychometrics has emphasized the primacy of a general factor while neuropsychology has emphasized specific abilities that are dissociable. This issue about the nature of human mental abilities is important for many practical concerns. Questions such as gender, ethnic, and age related differences in mental abilities are relatively easy to address if they are due to a single dominant trait. Presumably such a trait can be measured with any collection of complex cognitive tests. If there are many specific mental abilities, these would be much harder to measure and associated social issues would be more difficult to resolve. The relative importance of general and specific abilities also has implications for educational practices. This book includes the diverse opinions of experts from several fields including psychometrics, neuropsychology, speech language and hearing, and applied psychology.

Artificial General Intelligence Jordi Bieger, Ben Goertzel, Alexey Potapov, 2015-07-14. This book constitutes the refereed proceedings of the 8th International Conference on Artificial General Intelligence AGI 2015 held in Berlin, Germany, in July 2015. The 41 papers were carefully reviewed and selected from 72 submissions. The AGI conference series has played and continues to play a significant role in this resurgence of research on artificial intelligence in the deeper, original sense of the term of artificial intelligence. The conferences encourage interdisciplinary research based on different understandings of intelligence and exploring different approaches. AGI research differs from the ordinary AI research by stressing on the versatility and wholeness of intelligence and by carrying out the engineering practice according to an outline of a system comparable to the human mind in a certain sense.

The Road to General Intelligence Jerry Swan, Eric Nivel, Neel Kant, Jules Hedges, Timothy Atkinson, Bas Steunebrink, 2022-06-22. Humans have always dreamed of automating laborious physical and intellectual tasks, but the latter has proved more elusive than naively suspected. Seven decades of systematic study of Artificial Intelligence have witnessed cycles of hubris and despair. The successful realization of General Intelligence, evidenced by the kind of cross-domain flexibility enjoyed by humans, will spawn an industry worth billions and transform the range of viable automation tasks. The recent notable successes of Machine Learning have led to conjecture that it might be the appropriate technology for delivering General Intelligence. In this book, we argue that the framework of machine learning is fundamentally at odds with any reasonable notion of intelligence and that essential insights from previous decades of AI research are being forgotten. We claim that a fundamental change in perspective is required, mirroring that which took place in the philosophy of science in the mid-20th century. We propose a framework for General Intelligence together with a reference architecture that emphasizes the need for anytime bounded rationality and a situated denotational semantics. We give necessary emphasis to

compositional reasoning with the required compositionality being provided via principled symbolic numeric inference mechanisms based on universal constructions from category theory Details the pragmatic requirements for real world General Intelligence Describes how machine learning fails to meet these requirements Provides a philosophical basis for the proposed approach Provides mathematical detail for a reference architecture Describes a research program intended to address issues of concern in contemporary AI The book includes an extensive bibliography with 400 entries covering the history of AI and many related areas of computer science and mathematics The target audience is the entire gamut of Artificial Intelligence Machine Learning researchers and industrial practitioners There are a mixture of descriptive and rigorous sections according to the nature of the topic Undergraduate mathematics is in general sufficient Familiarity with category theory is advantageous for a complete understanding of the more advanced sections but these may be skipped by the reader who desires an overall picture of the essential concepts This is an open access book
