textbook is to provide a comprehensive introduction to the fundamental knowledge in embedded systems with applications in  
cyber physical systems and the Internet of things It starts with an introduction to the field and a survey of specification  
models and languages for embedded and cyber physical systems It provides a brief overview of hardware devices used for  
such systems and presents the essentials of system software for embedded systems including real time operating systems  
The author also discusses evaluation and validation techniques for embedded systems and provides an overview of  
techniques for mapping applications to execution platforms including multi core platforms Embedded systems have to  
operate under tight constraints and hence the book also contains a selected set of optimization techniques including software  
optimization techniques The book closes with a brief survey on testing This third edition has been updated and revised to  
reflect new trends and technologies such as the importance of cyber physical systems and the Internet of things the evolution  
of single core processors to multi core processors and the increased importance of energy efficiency and thermal issues
