Genus Silviculture Regiem Report:

Forestry and Water Conservation in South Africa Brett Bennett, Fred Kruger, 2015-11-11 This innovative interdisciplinary study focuses on the history science and policy of tree planting and water conservation in South Africa South Africa's forestry sector has sat often controversially at the crossroads of policy and scientific debates regarding water conservation economic development and biodiversity protection Bennett and Kruger show how debates about the hydrological impact of exotic tree planting in South Africa shaped the development of modern scientific ideas and state policies relating to timber plantations water conservation invasive species control and biodiversity management within South Africa as well as elsewhere in the world Forestry and Water Conservation in South Africa shows how scientific research on the impact of exotic and native vegetation led to the development of a comprehensive national policy for conserving water producing timber and protecting indigenous species from invasive alien plants Policies and laws relating to forests and water began to change in the late 1980s and early 1990s as a result of political and administrative changes within South Africa This book suggests that the country's contemporary policies towards timber plantations guided by the National Water Act of 1998 need to be reconsidered in light of the authors findings Bennett and Kruger also call for more interdisciplinary research and greater emphasis on integrated policies and management plans for forestry invasive alien plants water conservation and biodiversity preservation

Mangrove Ecology, Silviculture and Conservation Peter Saenger, 2013-06-29 Mangroves are a fascinating group of plants that occur on tropical and subtropical shorelines of all continents where they are exposed to saltwater inundation low oxygen levels around their roots high light and temperature conditions and periodic tropical storms Despite these harsh conditions mangroves may form luxuriant forests which are of significant economic and environmental value throughout the world they provide coastal protection and underpin fisheries and forestry operations as well as a range of other human activities This book provides an up to date account of mangrove plants from around the world together with silvicultural and restoration techniques and the management requirements of these communities to ensure their sustainability and conservation All aspects of mangroves and their conservation are critically re-examined Those activities which threaten their ongoing survival are identified and suggestions are offered to minimise their effects on these significant plant communities

Manual of Afforestation in Nepal J. K. Jackson, 1987 **The CABI Encyclopedia of Forest Trees** CABI, 2013 The

CABI Encyclopedia of Forest Trees provides an extensive overview of 300 of the world's most important forest trees. Tropical, subtropical, temperate and boreal trees of major economic importance are included, covering tree species used in agroforestry practices around the world. Many of the species covered are considered to be multipurpose trees with uses extending beyond timber alone; the land uses such as watershed protection or provision of windbreaks and non-wood uses such as the production of medicines, resins, food and forage are also listed. Comprehensive information is presented on each tree's importance with a summary of the main characteristics of the species, its potential for agroforestry use and any disadvantages it possesses. The tree's botanical features such as habit, stem form, foliage, inflorescence, flower and fruit characters and phenology are covered in detail with over 70 color plate pictures to aid identification. Also included are specific sections devoted to pests and diseases, distribution and silvicultural characteristics and practices including seed sowing, nursery care, planting, thinning and harvesting. In addition to the wealth of information detailed based on datasheets from CABI's Forestry Compendium, selected references for further reading are provided for each entry, making this book an essential reference work for forestry students, researchers and practitioners.
