Subject Learning in the Primary Curriculum Jill Bourne, Mary Briggs, Patricia Murphy, Michelle Selinger, 2005-08-03 The emphasis on subject knowledge in primary curricula is a world wide phenomenon and has become increasingly the focus of attention in England with the introduction of the National Curriculum and the appointment of subject co ordinators in schools Yet what exactly constitutes a subject and its practice remains controversial The book is organised into five parts Part one examines the general aims of primary education in order to give a background for a more detailed exploration of UK curriculum development Parts two three and four examine the core subjects of English science and mathematics whilst constantly bearing in mind the full range of views about the purpose of education and the nature of knowledge Part five introduces key debates about approaches to knowledge and raises issues about the future organisation of the curriculum Subject Learning in the Primary Curriculum is the OU reader for Module 832 Teaching and Learning in the Primary Core Curriculum in the MA in Education

Psychology and Mathematics

Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century

Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
