The Nervous System

The nervous system is an extremely complex, highly organized, and very sensitive structure that regulates all activities throughout the human body. The main purpose of the nervous system is to receive information from the environment and the body, process it, and then respond to it. The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system (CNS) is the part of the nervous system that is located in the head and the spinal cord. It is the most complex part of the nervous system. The brain is the most complex part of the CNS, and it is located in the head. The spinal cord is the part of the CNS that is located in the spinal column. The CNS is responsible for all of the body's activities, including thinking, feeling, and moving.

Peripheral Nervous System

There are all parts of the nervous system that are not part of the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all of the nerves that are outside of the brain and the spinal cord. The PNS is responsible for all of the body's activities, including thinking, feeling, and moving.

The PNS is divided into the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for all of the body's voluntary activities, such as thinking, feeling, and moving. The autonomic nervous system is responsible for all of the body's involuntary activities, such as breathing, heart rate, and digestion. The autonomic nervous system is divided into the sympathetic nervous system and the parasympathetic nervous system.
