Virmani,C. X. Mao,B. Hardy,2003 *Plant Breeding* H.K. Jain,M.C. Kharkwal,2012-12-06 The Indian Society of Genetics and Plant Breeding was established in 1941 in

recognition of the growing contribution of improved crop varieties to the country's agriculture. Scientific plant breeding had started in India soon after the rediscovery of Mendel's laws of heredity. The Indian Agricultural Research Institute set up in 1905 and a number of Agricultural Colleges in different parts of the country carried out some of the earliest work mostly in the form of pure line selections. In subsequent years hybridization programmes in crops like wheat, rice, oilseeds, grain legumes, sugarcane and cotton yielded a large number of improved cultivars with significantly higher yields. A turning point came in the 1960s with the development of hybrids in several crops including inter-specific hybrids in cotton. And when new germplasm with dwarfing genes became available in wheat and rice from CIMMYT and IRRI respectively, Indian plant breeders quickly incorporated these genes into the genetic background of the country's widely grown varieties with excellent grain quality and other desirable traits. This was to mark the beginning of modern agriculture in India as more and more varieties were developed characterized by a high harvest index and response to modern farm inputs like the inorganic fertilizers. India's green revolution which has led to major surpluses of food grains and other commodities like sugar and cotton has been made possible by the work of one of the largest groups of plant breeders working in a coordinated network.

**Breeding, Biotechnology and Seed Production of Field Crops** Bidhan Roy, 2013-01-15. In modern days crop improvement is a multidisciplinary division of agriculture. In this book entitled *Breeding, Biotechnology and Seed Production of Field Crops*, emphasis has been given on principles, methods and practices in plant breeding, biotechnology in crop improvement and seed production of field crops. The book has been written for all sections of learners, educators and staff members of seed industries. Particular importance has been underlined for postgraduate students who specialize in plant breeding and seed science. Each chapter of the book has been designed as per the recommended syllabus of Indian Council of Agricultural Research for the postgraduate students of various Agricultural Universities in our country. This book has been divided into two major parts: i) Principles of crop breeding and ii) Methods and practices of crop improvement and seed production of individual field crop. The book contains total of 18 chapters. First three chapters are related to shed light on the basic principles and remaining chapters deal with methods and practices of individual crop for improvement and seed production. We hope that the book will be ready to lend a hand to the advanced undergraduate students doing plant breeding in elective postgraduate students who opted plant breeding, teachers, researchers and staff members of private seed companies of this field of specialization.

Protecting Rice Grains in the Post-Genomic Era Yulin Jia, 2019-10-02. This book focuses on recent advances in genetic resources, host-pathogen interactions, assay methods, mechanisms of pathogenesis and disease resistance. Environmentally benign crop protection methods for major rice diseases such as rice blast, sheath blight, bacterial blight and newly emerged rice diseases such as false smut and bacterial panicle blight disease are included. *Cereals* Marcelo J. Carena, 2009-04-21 Agriculture depends on improved cultivars and cultivars are developed through proper plant breeding Unfortunately applied plant breeding programs that are focused on cereal commodity crops are under serious erosion because of lack of funding This loss of public support affects breeding continuity objectivity and perhaps equally important the training of future plant breeders and the utilization and improvement of plant genetic resources currently available Breeding programs should focus not only on short term research goals but also on long term genetic improvement of germplasm The research products of breeding programs are important not only for food security but also for commodity oriented public and private programs especially in the fringes of crop production Breeding strategies used for long term selection are often neglected but the reality is that long term research is needed for the success of short term products An excellent example is that genetically broad based public germplasm has significantly been utilized and recycled by industry producing billions of dollars for industry and farmers before intellectual property rights were available Successful examples of breeding continuity have served the sustainable cereal crop production that we currently have The fact that farmers rely on public and private breeding institutions for solving long term challenges should influence policy makers to reverse this trend of reduced funding Joint cooperation between industry and public institutions would be a good example to follow The objective of this volume is to increase the utilization of useful genetic resources and increase awareness of the relative value and impact of plant breeding and biotechnology That should lead to a more sustainable crop production and ultimately food security Applied plant breeding will continue to be the foundation to which molecular markers are applied Focusing useful molecular techniques on the right traits will build a strong linkage between genomics and plant breeding and lead to new and better cultivars Therefore more than ever there is a need for better communication and cooperation among scientists in the plant breeding and biotechnology areas We have an opportunity to greatly enhance agricultural production by applying the results of this research to meet the growing demands for food security and environmental conservation Ensuring strong applied plant breeding programs with successful application of molecular markers will be essential in ensuring such sustainable use of plant genetic resources
