Gosling,2009-11-01 Man's quest for speed is driven by two ambitions One is the competitive urge to excel to go as fast as possible by any available means and preferably to go faster than anybody else The other more practical aim is to make travel and transport as swift and efficient as possible The two are closely linked since by pushing technology to the limit to achieve the first we improve performance in the second with results that continue to shrink the world In this book Peter Gosling tells the fascinating story of the key scientific discoveries and technological breakthroughs in our drive to conquer distance from our earliest crude efforts using animal power and the wheel to harnessing the wind and the waves on through the watershed of the Industrial Revolution rail and steam the invention of the internal combustion engine through powered flight to rocketry and on to space travel We look at developments on land sea and air and the novel green solutions that scientists are exploring in order to meet today's environmental challenges Along the way we meet some of the remarkable men and women behind these breakthroughs whose vision and determination have helped to shape the modern world Written in an engaging non technical style The Quest for Speed captures both the thrill of the race and the adventure of science and points to the social and cultural changes ahead as technology accelerates the pace of life and transforms the human landscape SIMPLE GUIDES SCIENCE Simple Guides Science are user friendly introductions to the great scientific discoveries of the world Written by experts in the field they offer the general reader simple and engaging descriptions of key developments and breakthroughs in different fields of science and technology Simple Guides Science are written in a clear informal style using plain non technical language to provide accessible introductions to complex scientific theories Organized both by theme and chronologically the books link the major breakthroughs to the lives of their discoverers and inventors The clear structure and design enable the general reader to grasp essentials easily These guides will appeal to readers with no specific scientific knowledge yet with a thirst to know more about the world we live in The scientific developments and theories are brought to life by descriptions of their social contexts not only the breakthroughs are described but also their impact on society and the human story behind the scientists **The Twin Cities Green Guide** ,2001 *100% Renewable Energy Transition* Claudia Kemfert,Christian Breyer,Pao-Yu Oei,2020-01-23 Energy markets are already undergoing considerable transitions to accommodate new renewable energy forms new decentral energy players and new system requirements e.g flexibility and

resilience Traditional energy markets for fossil fuels are therefore under pressure while not yet mature renewable energy markets are emerging As a consequence investments in large scale and capital intensive traditional energy production projects are surrounded by high uncertainty and are difficult to hedge by private entities Traditional energy production companies are transforming into energy service suppliers and companies aggregating numerous potential market players are emerging while regulation and system management are playing an increasing role To address these increasing uncertainties and complexities economic analysis forecasting modeling and investment assessment require fresh approaches and views Novel research is thus required to simulate multiple actor interplays and idiosyncratic behavior The required approaches cannot deal only with energy supply but need to include active demand and cover systemic aspects Energy market transitions challenge policy making Market coordination failure the removal of barriers hindering restructuring and the combination of market signals with command and control policy measures are some of the new aims of policies The aim of this Special Issue is to collect research papers that address the above issues using novel methods from any adequate perspective including economic analysis modeling of systems behavioral forecasting and policy assessment The issue will include but is not be limited to Local control schemes and algorithms for distributed generation systems Centralized and decentralized sustainable energy management strategies Communication architectures protocols and properties of practical applications Topologies of distributed generation systems improving flexibility efficiency and power quality Practical issues in the control design and implementation of distributed generation systems Energy transition studies for optimized pathway options aiming for high levels of sustainability

How to Live a Low-Carbon Life Christopher Goodall,2012-05-04 Climate change is the greatest challenge facing humanity drastic reduction of carbon emissions is vital if we are to avoid a catastrophe that devastates large parts of the world Governments and businesses have been slow to act and individuals now need to take the lead The Earth can absorb no more than 3 tonnes of carbon dioxide emissions each year for every person on the planet if we are to keep temperature and rainfall change within tolerable limits Yet from cars and holiday flights to household appliances and the food on our plates Western consumer lifestyles leave each of us responsible for over 12 tonnes of carbon dioxide a year four times what the Earth can handle Individual action is essential if we want to avoid climate chaos How to Live a Low Carbon Life shows how easy it is to take responsibility providing the first comprehensive one stop reference guide to calculating your CO2 emissions and reducing them to a sustainable 3 tonnes a year

PV Charging and Storage for Electric Vehicles Pavol Bauer,Gautham Ram Chandra Mouli,2021-09-02 Electric vehicles are only green as long as the source of electricity is green as well At the same time renewable power production suffers from diurnal and seasonal variations creating the need for energy storage technology Moreover overloading and voltage problems are expected in the distributed network due to the high penetration of distributed generation and increased power demand from the charging of electric vehicles The energy and mobility transition hence calls for novel technological innovations in the field of sustainable electric mobility powered

from renewable energy This Special Issue focuses on recent advances in technology for PV charging and storage for electric vehicles
