

Representación de algoritmos

Un algoritmo es algo puramente conceptual que necesita una forma de representación, bien para comunicarlo a otra persona bien para ayudar a convertirlo en un programa. De hecho, la codificación en un lenguaje de programación, es una representación muy utilizada de un algoritmo, sin embargo tiene el inconveniente de que no todas las personas conocen el lenguaje que se haya elegido.

Por ello, existen diferentes métodos que permiten que se pueda independizar el algoritmo de su correspondiente codificación.

Veamos uno de ellos:

- Pseudocódigo

Pseudocódigo

El pseudocódigo es un lenguaje de especificación de algoritmos (no de programación) basado en un sistema notacional, con estructuras sintácticas y semánticas, similares a los lenguajes procedurales, por lo que no puede ser ejecutado directamente por una computadora.

El pseudocódigo utiliza para representar las sucesivas acciones, palabras reservadas similares a sus homónimas en los lenguajes de programación, tales como:

Inglés Pseudocódigo	Español
start	inicio
end	fin
stop	parar
if-then-else	si-entonces sino
while-do	mientras
repeat-until	-hacer, repetir-hasta

La ventajas del uso del pseudocódigo residen en:

- Su uso en la planificación de un programa: permitiendo que el programador se pueda concentrar en la lógica y en las estructuras de control y no tenga que preocuparse, por ahora de detalles acerca de la reglas sintácticas y semánticas de un lenguaje específico. Consiguientemente es más fácil de modificar en el caso de que se descubran errores o anomalías en la lógica del algoritmo.
- Aunque el pseudocódigo es independiente del lenguaje de alto nivel que vaya a utilizarse, un algoritmo expresado en pseudocódigo puede ser traducido más fácilmente a muchos de ellos.
