Automatic Disambiguation of Author Names in Bibliographic Repositories Anderson A. Ferreira, Marcos André Gonçalves, Alberto H. F. Laender, 2022-06-01 This book deals with a hard problem that is inherent to human language ambiguity In particular we focus on author name ambiguity a type of ambiguity that exists in digital bibliographic repositories which occurs when an author publishes works under distinct names or distinct authors publish works under similar names This problem may be caused by a number of reasons including the lack of standards and common practices and the decentralized generation of bibliographic content As a consequence the quality of the main services of digital bibliographic repositories such as search browsing and recommendation may be severely affected by author name ambiguity The focal point of the book is on automatic methods since manual solutions do not scale to the size of the current repositories or the speed in which they are updated Accordingly we provide an ample view on the problem of automatic disambiguation of author names summarizing the results of more than a decade of research on this topic conducted by our group which were reported in more than a dozen publications that received over 900 citations so far according to Google Scholar We start by discussing its motivational issues Chapter 1 Next we formally define the author name disambiguation task Chapter 2 and use this formalization to provide a brief taxonomically organized overview of the literature on the topic Chapter 3 We then organize summarize and integrate the efforts of our own group on developing solutions for the problem that have historically produced state of the art by the time of their proposals results in terms of the quality of the disambiguation results Thus

Chapter 4 covers HHC Heuristic based Clustering an author name disambiguation method that is based on two specific real world assumptions regarding scientific authorship Then Chapter 5 describes SAND Self training Author Name Disambiguator and Chapter 6 presents two incremental author name disambiguation methods namely INDi Incremental Unsupervised Name Disambiguation and INC Incremental Nearest Cluster Finally Chapter 7 provides an overview of recent author name disambiguation methods that address new specific approaches such as graph based representations alternative predefined similarity functions visualization facilities and approaches based on artificial neural networks The chapters are followed by three appendices that cover respectively i a pattern matching function for comparing proper names and used by some of the methods addressed in this book ii a tool for generating synthetic collections of citation records for distinct experimental tasks and iii a number of datasets commonly used to evaluate author name disambiguation methods In summary the book organizes a large body of knowledge and work in the area of author name disambiguation in the last decade hoping to consolidate a solid basis for future developments in the field Incidental Exposure to Online News Borchuluun

Yadamsuren,Sanda Erdelez,2022-05-31 Rapid technological changes and availability of news anywhere and at any moment have changed how people seek out news Increasingly consumers no longer take deliberate actions to read the news instead stumbling upon news online While the emergence of serendipitous news discovery online has been recognized in the literature there is a limited understanding about how people experience this behavior Based on the mixed method study that investigated online news reading behavior of residents in a Midwestern U S town we explore how people accidentally discover news when engaged in various online activities Employing the grounded theory approach we define Incidental Exposure to Online News IEON as individual s memorable experiences of chance encounters with interesting useful or surprising news while using the Internet for news browsing or for non news related online activities such as checking email or visiting social networking sites The book presents a conceptual framework of IEON that advances research and an understanding of serendipitous news discovery from people s holistic experiences of news consumption in their everyday lives The proposed IEON Process Model identifies key steps in an IEON experience that could help news reporters and developers of online news platforms create innovative storytelling and design strategies to catch consumers attention during their online activities Finally this book raises important methodological questions for further investigation how should serendipitous news discovery be studied measured and observed and what are the essential elements that differentiate this behavior from other types of online news consumption and information behaviors **The Taxobook** Marjorie

Hlava,2022-05-31 This book outlines the basic principles of creation and maintenance of taxonomies and thesauri It also provides step by step instructions for building a taxonomy or thesaurus and discusses the various ways to get started on a taxonomy construction project Often the first step is to get management and budgetary approval so I start this book with a discussion of reasons to embark on the taxonomy journey From there I move on to a discussion of metadata and how

taxonomies and metadata are related and then consider how where and why taxonomies are used Information architecture has its cornerstone in taxonomies and metadata While a good discussion of information architecture is beyond the scope of this work I do provide a brief discussion of the interrelationships among taxonomies metadata and information architecture Moving on to the central focus of this book I introduce the basics of taxonomies including a definition of vocabulary control and why it is so important how indexing and tagging relate to taxonomies a few of the types of tagging and a definition and discussion of post and pre coordinate indexing After that I present the concept of a hierarchical structure for vocabularies and discuss the differences among various kinds of controlled vocabularies such as taxonomies thesauri authority files and ontologies Once you have a green light for your project what is the next step Here I present a few options for the first phase of taxonomy construction and then a more detailed discussion of metadata and markup languages I believe that it is important to understand the markup languages SGML and XML specifically and HTML to a lesser extent in relation to information structure and how taxonomies and metadata feed into that structure After that I present the steps required to build a taxonomy from defining the focus collecting and organizing terms analyzing your vocabulary for even coverage over subject areas filling in gaps creating relationships between terms and applying those terms to your content Here I offer a cautionary note don't believe that your taxonomy is done Regular scheduled maintenance is an important critical really component of taxonomy construction projects After you've worked through the steps in this book you will be ready to move on to integrating your taxonomy into the workflow of your organization This is covered in Book 3 of this series

Learning from Multiple Social Networks Liqiang Nie, Xuemeng Song, Tat-Seng Chua, 2022-05-31 With the proliferation of social network services more and more social users such as individuals and organizations are simultaneously involved in multiple social networks for various purposes In fact multiple social networks characterize the same social users from different perspectives and their contexts are usually consistent or complementary rather than independent Hence as compared to using information from a single social network appropriate aggregation of multiple social networks offers us a better way to comprehensively understand the given social users Learning across multiple social networks brings opportunities to new services and applications as well as new insights on user online behaviors yet it raises tough challenges

- 1 How can we map different social network accounts to the same social users
- 2 How can we complete the item wise and block wise missing data
- 3 How can we leverage the relatedness among sources to strengthen the learning performance
- And 4 How can we jointly model the dual heterogeneities

multiple tasks exist for the given application and each task has various features from multiple sources These questions have been largely unexplored to date We noticed this timely opportunity and in this book we present some state of the art theories and

novel practical applications on aggregation of multiple social networks In particular we first introduce multi source dataset construction We then introduce how to effectively and efficiently complete the item wise and block wise missing data which are caused by the inactive social users in some social networks We next detail the proposed multi source mono task learning model and its application in volunteerism tendency prediction As a counterpart we also present a mono source multi task learning model and apply it to user interest inference We seamlessly unify these models with the so called multi source multi task learning and demonstrate several application scenarios such as occupation prediction Finally we conclude the book and figure out the future research directions in multiple social network learning including the privacy issues and source complementarity modeling This is preliminary research on learning from multiple social networks and we hope it can inspire more active researchers to work on this exciting area If we have seen further it is by standing on the shoulders of giants

Digital Libraries Applications Edward A. Fox, Jonathan P. Leidig, 2022-05-31 Digital libraries DLs have evolved since their launch in 1991 into an important type of information system with widespread application This volume advances that trend further by describing new research and development in the DL field that builds upon the 5S Societies Scenarios Spaces Structures Streams framework which is discussed in three other DL volumes in this series While the 5S framework may be used to describe many types of information systems and is likely to have even broader utility and appeal we focus here on digital libraries Drawing upon six Akbar Kozevitch Leidig Li Murthy Park completed and two Chen Fuh in process dissertations as well as the efforts of collaborating researchers and scores of related publications presentations tutorials and reports this book demonstrates the applicability of 5S in five digital library application areas that also have importance in the context of the WWW Web 2 0 and innovative information systems By integrating surveys of the state of the art new research connections with formalization case studies and exercises projects this book can serve as a textbook for those interested in computing information and or library science Chapter 1 focuses on images explaining how they connect with information retrieval in the context of CBIR systems Chapter 2 gives two case studies of DLs used in education which is one of the most common applications of digital libraries Chapter 3 covers social networks which are at the heart of work on Web 2 0 explaining the construction and use of deduced graphs that can enhance retrieval and recommendation Chapter 4 demonstrates the value of DLs in eScience focusing in particular on cyber infrastructure for simulation Chapter 5 surveys geospatial information in DLs with a case study on geocoding Given this rich content we trust that any interested in digital libraries or in related systems will find this volume to be motivating intellectually satisfying and useful We hope it will help move digital libraries forward into a science as well as a practice We hope it will help build community that will address the needs of the next generation of DLs

Social Media and Library Services Lorri Mon, 2022-05-31 The rise of social media technologies has created new ways to seek and share information for millions of users worldwide but also has presented new challenges for libraries in meeting users where they are within social spaces From social networking sites such as Facebook

and Google and microblogging platforms such as Twitter and Tumblr to the image and video sites of YouTube Flickr Instagram and to geotagging sites such as Foursquare libraries have responded by establishing footholds within a variety of social media platforms and seeking new ways of engaging with online users in social spaces Libraries are also responding to new social review sites such as Yelp and Tripadvisor awareness sites including StumbleUpon Pinterest Goodreads and Reddit and social question and answer Q A sites such as Yahoo Answers sites which engage social media users in functions similar to traditional library content curation readers advisory information and referral and reference services Establishing a social media presence extends the library's physical manifestation into virtual space and increases the library's visibility reach and impact However beyond simply establishing a social presence for the library a greater challenge is building effective and engaging social media sites that successfully adapt a library's visibility voice and presence to the unique contexts audiences and cultures within diverse social media sites This lecture examines the research and theory on social media and libraries providing an overview of what is known and what is not yet known about libraries and social media Chapter 1 focuses on the social media environments within which libraries are establishing a presence including how social media sites differ from each other yet work together within a social ecosphere Chapter 2 examines how libraries are engaging with users across a variety of social media platforms and the extent to which libraries are involved in using these different social media platforms as well as the activities of libraries in presenting a social self sharing information and interacting with users via social media Chapter 3 explores metrics and measures for assessing the impact of the library's activity in social media sites The book concludes with Chapter 4 on evolving directions for libraries and social media including potential implications of new and emerging technologies for libraries in social spaces Table of Contents Preface The Social Media Environment Libraries and Social Media Assessing Social Media Sites and Services Evolving Directions in Social Libraries Bibliography Author Biography

Measuring User Engagement Mounia Lalmas, Heather O'Brien, Elad Yom-Tov, 2022-05-31 User engagement refers to the quality of the user experience that emphasizes the positive aspects of interacting with an online application and in particular the desire to use that application longer and repeatedly User engagement is a key concept in the design of online applications whether for desktop tablet or mobile motivated by the observation that successful applications are not just used but are engaged with Users invest time attention and emotion in their use of technology and seek to satisfy pragmatic and hedonic needs Measurement is critical for evaluating whether online applications are able to successfully engage users and may inform the design of and use of applications User engagement is a multifaceted complex phenomenon this gives rise to a number of potential measurement approaches Common ways to evaluate user engagement include using self report measures e.g. questionnaires observational methods e.g. facial expression analysis speech analysis neurophysiological signal processing methods e.g. respiratory and cardiovascular accelerations and decelerations muscle spasms and web analytics e.g. number of site visits click depth These methods represent various trade offs in terms of the setting

laboratory versus in the wild object of measurement user behaviour affect or cognition and scale of data collected For instance small scale user studies are deep and rich but limited in terms of generalizability whereas large scale web analytic studies are powerful but negate users motivation and context The focus of this book is how user engagement is currently being measured and various considerations for its measurement Our goal is to leave readers with an appreciation of the various ways in which to measure user engagement and their associated strengths and weaknesses We emphasize the multifaceted nature of user engagement and the unique contextual constraints that come to bear upon attempts to measure engagement in different settings and across different user groups and web domains At the same time this book advocates for the development of good measures and good measurement practices that will advance the study of user engagement and improve our understanding of this construct which has become so vital in our wired world **Digital Library**

Technologies Edward A. Fox, Ricardo da Silva Torres, 2022-06-01 Digital libraries DLs have introduced new technologies as well as leveraging enhancing and integrating related technologies since the early 1990s These efforts have been enriched through a formal approach e g the 5S Societies Scenarios Spaces Structures Streams framework which is discussed in two earlier volumes in this series This volume should help advance work not only in DLs but also in the WWW and other information systems Drawing upon four Kozevitch Murthy Park Yang completed and three Elsherbiny Farag Srinivasan in process dissertations as well as the efforts of collaborating researchers and scores of related publications presentations tutorials and reports this book should advance the DL field with regard to at least six key technologies By integrating surveys of the state of the art new research connections with formalization case studies and exercises projects this book can serve as a computing or information science textbook It can support studies in cyber security document management hypertext hypermedia IR knowledge management LIS multimedia and machine learning Chapter 1 with a case study on fingerprint collections focuses on complex composite compound objects connecting DL and related work on buckets DCC and OAI ORE Chapter 2 discussing annotations as in hypertext hypermedia emphasizes parts of documents including images as well as text managing superimposed information The SuperIDR system and prototype efforts with Flickr should motivate further development and standardization related to annotation which would benefit all DL and WWW users Chapter 3 on ontologies explains how they help with browsing query expansion focused crawling and classification This chapter connects DLs with the Semantic Web and uses CTRnet as an example Chapter 4 on hierarchical classification leverages LIS theory as well as machine learning and is important for DLs as well as the WWW Chapter 5 on extraction from text covers document segmentation as well as how to construct a database from heterogeneous collections of references from ETDs i e converting strings to canonical forms Chapter 6 surveys the security approaches used in information systems and explains how those approaches can apply to digital libraries which are not fully open Given this rich content those interested in DLs will be able to find solutions to key problems using the right technologies and methods We hope this book will help show how formal

approaches can enhance the development of suitable technologies and how they can be better integrated with DLs and other information systems **Web Indicators for Research Evaluation** Michael Thelwall, 2022-05-31 In recent years there has been an increasing demand for research evaluation within universities and other research based organisations In parallel there has been an increasing recognition that traditional citation based indicators are not able to reflect the societal impacts of research and are slow to appear This has led to the creation of new indicators for different types of research impact as well as timelier indicators mainly derived from the Web These indicators have been called altmetrics webometrics or just web metrics This book describes and evaluates a range of web indicators for aspects of societal or scholarly impact discusses the theory and practice of using and evaluating web indicators for research assessment and outlines practical strategies for obtaining many web indicators In addition to describing impact indicators for traditional scholarly outputs such as journal articles and monographs it also covers indicators for videos datasets software and other non standard scholarly outputs The book describes strategies to analyse web indicators for individual publications as well as to compare the impacts of groups of publications The practical part of the book includes descriptions of how to use the free software Webometric Analyst to gather and analyse web data This book is written for information science undergraduate and Master s students that are learning about alternative indicators or scientometrics as well as Ph D students and other researchers and practitioners using indicators to help assess research impact or to study scholarly communication **Trustworthy Policies for**

Dressler, 2022-06-01 As digital collections continue to grow the underlying technologies to serve up content also continue to expand and develop As such new challenges are presented which continue to test ethical ideologies in everyday environs of the practitioner There are currently no solid guidelines or overarching codes of ethics to address such issues The digitization of modern archival collections in particular presents interesting conundrums when factors of privacy are weighed and

reviewed in both small and mass digitization initiatives Ethical decision making needs to be present at the onset of project planning in digital projects of all sizes and we also need to identify the role and responsibility of the practitioner to make more virtuous decisions on behalf of those with no voice or awareness of potential privacy breaches In this book notions of what constitutes private information are discussed as is the potential presence of such information in both analog and digital collections This book lays groundwork to introduce the topic of privacy within digital collections by providing some examples from documented real world scenarios and making recommendations for future research A discussion of the notion privacy as concept will be included as well as some historical perspective with perhaps one the most cited work on this topic for example Warren and Brandeis Right to Privacy 1890 Concepts from the The Right to Be Forgotten case in 2014 Google Spain SL Google Inc v Agencia Espa la de Proteccei n de Datos Mario Costeja Gonz lez are discussed as to how some lessons may be drawn from the response in Europe and also how European data privacy laws have been applied The European ideologies are contrasted with the Right to Free Speech in the First Amendment in the U S highlighting the complexities in setting guidelines and practices revolving around privacy issues when applied to real life scenarios Two ethical theories are explored Consequentialism and Deontological Finally ethical decision making models will also be applied to our framework of digital collections Three case studies are presented to illustrate how privacy can be defined within digital collections in some real world examples *Click Models for Web Search* Aleksandr Chuklin,Ilya Markov,Maarten de Rijke,2022-05-31 With the rapid growth of web search in recent years the problem of modeling its users has started to attract more and more attention of the information retrieval community This has several motivations By building a model of user behavior we are essentially developing a better understanding of a user which ultimately helps us to deliver a better search experience A model of user behavior can also be used as a predictive device for non observed items such as document relevance which makes it useful for improving search result ranking Finally in many situations experimenting with real users is just infeasible and hence user simulations based on accurate models play an essential role in understanding the implications of algorithmic changes to search engine results or presentation changes to the search engine result page In this survey we summarize advances in modeling user click behavior on a web search engine result page We present simple click models as well as more complex models aimed at capturing non trivial user behavior patterns on modern search engine result pages We discuss how these models compare to each other what challenges they have and what ways there are to address these challenges We also study the problem of evaluating click models and discuss the main applications of click models **Digital Libraries for Cultural Heritage** Tatjana Aparac-Jelušić,2022-05-31 European digital libraries have existed in diverse forms and with quite different functions priorities and aims However there are some common features of European based initiatives that are relevant to non European communities There are now many more challenges and changes than ever before and the development rate of new digital libraries is ever accelerating Delivering educational cultural and research resources especially from major scientific

and cultural organizations has become a core mission of these organizations Using these resources they will be able to investigate educate and elucidate in order to promote and disseminate and to preserve civilization Extremely important in conceptualizing the digital environment priorities in Europe was its cultural heritage and the feeling that these rich resources should be open to Europe and the global community In this book we focus on European digitized heritage and digital culture and its potential in the digital age We specifically look at the EU and its approaches to digitization and digital culture problems detected and achievements reached all with an emphasis on digital cultural heritage We seek to report on important documents that were prepared on digitization copyright and related documents research and education in the digital libraries field under the auspices of the EU some other European and national initiatives and funded projects The aim of this book is to discuss the development of digital libraries in the European context by presenting primarily to non European communities interested in digital libraries the phenomena initiatives and developments that dominated in Europe We describe the main projects and their outcomes and shine a light on the number of challenges that have been inspiring new approaches cooperative efforts and the use of research methodology at different stages of the digital libraries development The specific goals are reflected in the structure of the book which can be conceived as a guide to several main topics and sub topics However the author s scope is far from being comprehensive since the field of digital libraries is very complex and digital libraries for cultural heritage is even moreso *Mobile Search Behaviors* Dan Wu,Shaobo H.

Liang,2022-05-31 With the rapid development of mobile Internet and smart personal devices in recent years mobile search has gradually emerged as a key method with which users seek online information In addition cross device search also has been regarded recently as an important research topic As more mobile applications APPs integrate search functions a user s mobile search behavior on different APPs becomes more significant This book provides a systematic review of current mobile search analysis and studies user mobile search behavior from several perspectives including mobile search context APP usage and different devices Two different user experiments to collect user behavior data were conducted Then through the data from user mobile phone usage logs in natural settings we analyze the mobile search strategies employed and offer a context based mobile search task collection which then can be used to evaluate the mobile search engine In addition we combine mobile search with APP usage to give more in depth analysis such as APP transition in mobile search and follow up actions triggered by mobile search The study combining the mobile search with APP usage can contribute to the interaction design of APPs such as the search recommendation and APP recommendation Addressing the phenomenon of users owning more smart devices today than ever before we focus on user cross device search behavior We model the information preparation behavior and information resumption behavior in cross device search and evaluate the search performance in cross device search Research on mobile search behaviors across different devices can help to understand online user information behavior comprehensively and help users resume their search tasks on different devices *Trustworthy*

Communications and Complete Genealogies Reagan W. Moore, 2022-06-01 Genealogies document relationships between persons involved in historical events Information about the events is parsed from communications from the past This book explores a way to organize information from multiple communications into a trustworthy representation of a genealogical history of the modern world The approach defines metrics for evaluating the consistency correctness closure connectivity completeness and coherence of a genealogy The metrics are evaluated using a 312 000 person research genealogy that explores the common ancestors of the royal families of Europe A major result is that completeness is defined by a genealogy symmetry property driven by two exponential processes the doubling of the number of potential ancestors each generation and the rapid growth of lineage coalescence when the number of potential ancestors exceeds the available population A genealogy expands from an initial root person to a large number of lineages which then coalesce into a small number of progenitors Using the research genealogy candidate progenitors for persons of Western European descent are identified A unifying ancestry is defined to which historically notable persons can be linked

The Taxobook Marjorie M.K. Hlava, 2022-06-01 This book is the third of a three part series on taxonomies and covers putting your taxonomy into use in as many ways as possible to maximize retrieval for your users Chapter 1 suggests several items to research and consider before you start your implementation and integration process It explores the different pieces of software that you will need for your system and what features to look for in each Chapter 2 launches with a discussion of how taxonomy terms can be used within a workflow connecting two or more taxonomies and intelligent coordination of platforms and taxonomies Microsoft SharePoint is a widely used and popular program and I consider their use of taxonomies in this chapter Following that is a discussion of taxonomies and semantic integration and then the relationship between indexing and the hierarchy of a taxonomy Chapter 3 How is a Taxonomy Connected to Search provides discussions and examples of putting taxonomies into use in practical applications It discusses displaying content based on search how taxonomy is connected to search using a taxonomy to guide a searcher tools for search including search engines crawlers and spiders and search software the parts of a search capable system and then how to assemble that search capable system This chapter also examines how to measure quality in search the different kinds of search and theories on search from several famous theoreticians two from the 18th and 19th centuries and two contemporary Following that is a section on inverted files parsing discovery and clustering While you probably don't need a comprehensive understanding of these concepts to build a solid workable system enough information is provided for the reader to see how they fit into the overall scheme This chapter concludes with a look at faceted search and some possibilities for search interfaces Chapter 4 Implementing a Taxonomy in a Database or on a Website starts where many content systems really should with the authors or at least the people who create the content This chapter discusses matching up various groups of related data to form connections data visualization and text analytics and mobile and e commerce applications for taxonomies Finally Chapter 5 presents some educated guesses about the future of
