Revolution transformation upheaval and promise

Yesterday the technologies of communication were accessible only to experts today they are a subject of constant discussion in the media

New services are advertised on a daily basis and the potential realized or not of these technologies is a constant source of comment and discussion

But beyond the media frenzy things really are developing with

increasing speed driven by the power of the Internet The network has built up an ongoing relationship between research centres development teams and marketing teams allowing a constructive collaboration between technologies The network has become the catalyst for its own evolution The arrival of IP and GSM has given rise to new corporate giants like Cisco Systems and Nokia Operators witnessing the diversification of their main sources of revenue have been forced to merge or split Entirely new actors from various horizons are counting on their ability to act as operators without a network to their name Traditional equipment manufacturers have had to rethink their product lines in view of these new foundations Likewise governments have understood the need to create a body of laws that promote the harmonious and rapid development of networks to offer alternatives for operators and service providers These often complex regulations act both as constraint and opportunity for operators and give direction to the actions of actors across the board

Private Data and Public Value Holly Jarman, Luis F. Luna-Reyes, 2016-02-26 This book investigates the ways in which these systems can promote public value by encouraging the disclosure and reuse of privately held data in ways that support collective values such as environmental sustainability Supported by funding from the National Science Foundation the authors research team has been working on one such system designed to enhance consumers ability to access information about the sustainability of the products that they buy and the supply chains that produce them Pulled by rapidly developing technology and pushed by budget cuts politicians and public managers are attempting to find ways to increase the public value of their actions Policymakers are increasingly acknowledging the potential that lies in publicly disclosing more of the data that they hold as well as incentivizing individuals and organizations to access use and combine it in new ways Due to technological advances which include smarter phones better ways to track objects and people as they travel and more efficient data processing it is now possible to build systems which use shared transparent data in creative ways The book adds to the current conversation among academics and practitioners about how to promote public value through data disclosure focusing particularly on the roles that governments businesses and non profit actors can play in this process making it of interest to both scholars and policy makers

Enterprise Modeling and Computing with UML Rittgen, Peter, 2006-09-30 This book bridges two fields that although closely related are often studied in isolation enterprise modeling and information systems modeling The principal idea is to use a standard language for modeling information systems UML as a catalyst and investigate its potential for modeling enterprises Provided by publisher
