A. Biere, H. van Maaren, 2021-05-05 Propositional logic has been recognized throughout the centuries as one of the cornerstones of reasoning in philosophy and mathematics. Over time its formalization into Boolean algebra was accompanied by the recognition that a wide range of combinatorial problems can be expressed as propositional satisfiability SAT problems. Because of this dual role SAT developed into a mature multi-faceted scientific discipline and from the earliest days of computing a search was underway to discover how to solve SAT problems in an automated fashion. This book, the Handbook of Satisfiability, is the second updated and revised edition of the book first published in 2009 under the same name. The handbook aims to capture the full breadth and depth of SAT and to bring together significant progress and advances in automated solving. Topics covered span practical and theoretical research on SAT and its applications and include search algorithms, heuristics, analysis of algorithms, hard instances, randomized formulae, problem encodings, industrial applications, solvers, simplifiers, tools, case studies, and empirical results. SAT is interpreted in a broad sense so as well as propositional satisfiability there are chapters covering the domain of quantified Boolean formulae, QBF constraints programming techniques, CSP for word level problems and their propositional encoding and satisfiability modulo theories, SMT. An extensive bibliography completes each chapter. This second edition of the handbook will be of interest to researchers, graduate students, final year undergraduates, and practitioners using or contributing to SAT and will provide both an inspiration and a rich resource for their work. Edmund Clarke, 2007 ACM Turing Award Recipient. SAT solving is a key technology for 21st century computer science. Donald Knuth, 1974 ACM Turing Award Recipient. SAT is evidently a killer app because it is key to the solution of so many other problems. Stephen Cook, 1982 ACM Turing Award Recipient. The SAT problem is at the core of arguably the most fundamental question in computer science: What makes a problem hard?

**Object-Oriented Technology. ECOOP 2007 Workshop Reader** Michael Cebulla, 2008-02-15. This volume contains the reports from the workshop held at the 21st European Conference on Object Oriented Programming ECOOP 2007 at Technische Universität Berlin. Nineteen workshops were held in the course of this conference on July 30 and July 31, 2007, covering a large spectrum of hot research topics. As in previous editions of ECOOP, numerous scientists from academia and industry took the chance to present innovative and topical ideas in an environment offering optimal conditions for exciting discussions and fruitful interactions. The Workshop Reader, which contains the reports from the workshops, has been a substantial part of the ECOOP conference for more than 10 years. During the pre-conference phase, the workshop organizers are invited to author a report about their workshops where they have the opportunity to describe the state of the art, the discussions and the trends in the fields of their workshop. In addition, some of the organizational aspects may be discussed. This volume collects 19 reports from high quality workshops whose topics were related to selected aspects in the field of object oriented programming and technology. Following the example of previous workshop readers, we introduced some notions in order to establish thematic clusters. These notions are: 1. Programming Languages, 2. Aspects, 3. Formal Techniques, Roles, Components, 4. Software Engineering, and 5. Applications. Three months after the conference, we are now able to present the reports which describe the state of the art, the discussions and the relevant trends in the research fields addressed by the workshops. In sum, each of these reports thus contributes to a panoptic overview of the current tendencies in the lively field of object oriented programming and technology. Readers from academia and industry who want to be informed about the current developments in this research area, thus can highly profit from this volume.
