Global Geographies of the Internet  
 Barney Warf,2012-08-01 Today roughly 2 billion people use the internet and its applications have flourished in number and

importance This volume will examine the growth and geography of the internet from a political economy perspective Its central motivation is to illustrate that cyberspace does not exist in some aspatial void but is deeply rooted in national and local political and cultural contexts Toward that end it will invoke a few major theorists of cyberspace but apply their perspectives in terms that are accessible to readers with no familiarity with them Beyond summaries of the infrastructure that makes the internet possible and global distributions of users it delves into issues such as the digital divide to emphasize the inequalities that accompany the growth of cyberspace It also addresses internet censorship e commerce and e government issues that have received remarkably little scholarly attention particularly from a spatial perspective Throughout it demonstrates that in cyberspace place matters so that no comprehensive understanding of the internet can be achieved without considering how it is embedded within and in turn changes local institutional and political contexts Thus the book rebuts simplistic death of distance views or those that assert there is or can be a one size fits all cookie cutter model of the internet applicable to all times and places
