Green Outcomes in the Real World Peter McManners, 2016-04-15 Over the last three decades the world economy has grown strongly on the back of globalization supported by the policies of free trade open markets and privatisation. Support has also grown for the concept of sustainability meeting the needs of the present without compromising the ability of future generations to meet their own needs. But as the Earth's systems come under increasing strain the inherent conflict between sustainability and globalization has been exposed. *Green Outcomes in a Real World* examines the shift in thinking required to reconcile these two important areas of policy. In this ground breaking book Peter McManners has coined the term Proximization to define a new policy framework. The principles of Proximization are sustainability subsidiarity primacy of the state and market economics and the application of these familiar concepts towards a sustainable globalised world is novel and different. The author argues that

adherence to the principles of proximization will return world society to a stable natural order and will mean changes Global commodity flows will reduce and barriers to migration will increase National governments will demand more control over their finances leading to restrictions on capital flows Indeed Peter believes that an element of selfish determination is needed The new world order will be sustainable by design Global organisations such as the UN national governments and global corporations will have to understand and apply a different paradigm The arguments in this book do not reflect the idealism or even naivety of some of the green movement This book is about hard edged reality presented by an author with huge experience and a deep understanding of the business perspective It will appeal to a wide range of professionals involved in setting policy and future direction for businesses governments and non governmental bodies as well as to those with an academic interest in business economics social and environmental issues and public policy **Manias, Panics, and**

, 2006 *Estimating Impact* Alexander Kott, Gary Citrenbaum, 2010-09-15 Sociological theories of crime include theories of strain blame crime on personal stressors theories of social learning blame crime on its social rewards and see crime more as an institution in conflict with other institutions rather than as individual deviance and theories of control look at crime as natural and rewarding and explore the formation of institutions that control crime Theorists of corruption generally agree that corruption is an expression of the Patron Client relationship in which a person with access to resources trades resources with kin and members of the community in exchange for loyalty Some approaches to modeling crime and corruption do not involve an explicit simulation rule based systems Bayesian networks game theoretic approaches often based on rational choice theory and Neoclassical Econometrics a rational choice based approach Simulation based approaches take into account greater complexities of interacting parts of social phenomena These include fuzzy cognitive maps and fuzzy rule sets that may incorporate feedback and agent based simulation which can go a step farther by computing new social structures not previously identified in theory The latter include cognitive agent models in which agents learn how to perceive their environment and act upon the perceptions of their individual experiences and reactive agent simulation which while less capable

than cognitive agent simulation is adequate for testing a policy's effects with existing societal structures. For example, NNL is a cognitive agent model based on the REPAST Symphony toolkit.

Southern-Led Development Finance Diana Barrowclough, Kevin P. Gallagher, Richard Kozul-Wright, 2020-09-29. Southern Led Development Finance examines some of the innovative new south-south financial arrangements and institutions that have emerged in recent years as countries from the Global South seek to transform their economies and to shield themselves from global economic turbulence. Even before the Covid-19 crisis, it was clear to many that the global economy needed a reset and a massive increase in public investment. In the last decade, southern-owned development banks, infrastructure funds, foreign exchange reserve funds, and Sovereign Wealth Funds have doubled the amount of long-term finance available to developing countries. Now, as the world considers what a post-Covid-19 future will look like, it is clear that Southern-led institutions will do much of the heavy lifting. This book brings together insights from theory and practice, incorporating the voices of bankers, policymakers, and practitioners alongside international academics. It covers the most significant new initiatives stemming from Asia, tried and tested examples in Latin America, and in Africa, and the contribution of advanced economies. Whilst the book highlights the potential for Southern-led initiatives to change the global financial landscape profoundly, it also shows their varied impacts and concludes that more is needed for development than just the technical availability of funds. As governments and businesses become frustrated by the traditional North-dominated mechanisms and international financial system, this book argues that southern-led development finance will play an important role in the search for more inclusive, equitable, and sustainable patterns of investment, trade, and growth in the post-Covid landscape. It will be of interest to practitioners, policy makers, researchers, and students working on development and finance everywhere.
